General Purpose Axial Lead Glass Packaged Schottky Diodes

Rev. V3

Features
- Low Leakage Current
- Pico Second Switching Speed
- Glass Hermetically Sealed Packages
- Offered in Tape & Reel Packaging
- RoHS* Compliant

Description and Applications
These silicon diodes are packaged in a hermetic axial lead glass package. Various uses include detecting, mixing and switching at low power levels. They are suitable for commercial switching along with control functions in narrow band receivers. These diodes can also be used in the UHF and VHF frequency bands for pulse shaping, sampling and as fast logic gates.

Electrical Specifications\(^1\): \(T_A = +25^\circ C\)

2. Exceeding any one or combination of these limits may cause permanent damage to this device.
3. MACOM does not recommend sustained operation near these survivability limits.

Assembly Recommendations

- Leads on axial leaded devices must be formed while being held firm. Bending the leads too close to the body of the part may cause internal damage to the device. Bends <0.060” from body are not recommended. Appropriate fixturing should be used.

- Devices may be soldered using standard 60/40, Sn/Pb or RoHS compliant solders. Axial leads are tin plated, 50 μM, thick to ensure an optimum connection.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 0 devices.

Package Outline Dimensions
