### Description

The “Ultrafast Recovery” rectifier diode series is military qualified to MIL-PRF-19500/477 and is ideal for high reliability applications. These industry recognized 6 Amp rated rectifiers for working peak reverse voltages from 50 to 150 volts are hermetically sealed with voidless glass construction.

The rectifier diode series are ideally suited for switching power supplies or other applications requiring extremely fast switching, low forward loss, high forward surge current capability and low thermal resistance. These diodes have a controlled avalanche with peak reverse power capability.

**Notes:**

1. Dimensions are in inches. Millimeters are given for general information only.
2. Dimension BL shall include the entire body including slugs and sections of the lead over which the diameter is uncontrolled. This uncontrolled area is defined as the zone between the edge of the diode body and extending 0.050 inch (1.27 mm) onto the leads.
3. Dimension BD shall be measured at the largest diameter.
4. Dimensions are pre-solder dip.
5. Minimum clearance of glass body to mounting surface on all orientations.
6. In accordance with ASME Y14.5M, diameters are equivalent to  $\Phi$ x symbology.
