Description

The ENGPD00015 is a two-way, in-phase Wilkinson-style power splitter / combiner. The device is optimized for performance from 4 to 13 GHz. The chip device offers excellent return loss, high isolation, and very small size. The power divider has gold backside metallization and is designed to be silver epoxy attached. The RF interconnects are designed to account for wire bonds and external microstrip flares for optimal integrated return loss. No additional ground interconnects are required. Nichrome resistors with low temperature coefficients are set up to handle half-watt RF input power levels.

1. Exceeding any one or combination of these limits may cause permanent damage to this device.
2. MACOM does not recommend sustained operation near these survivability limits.

Handling Procedures

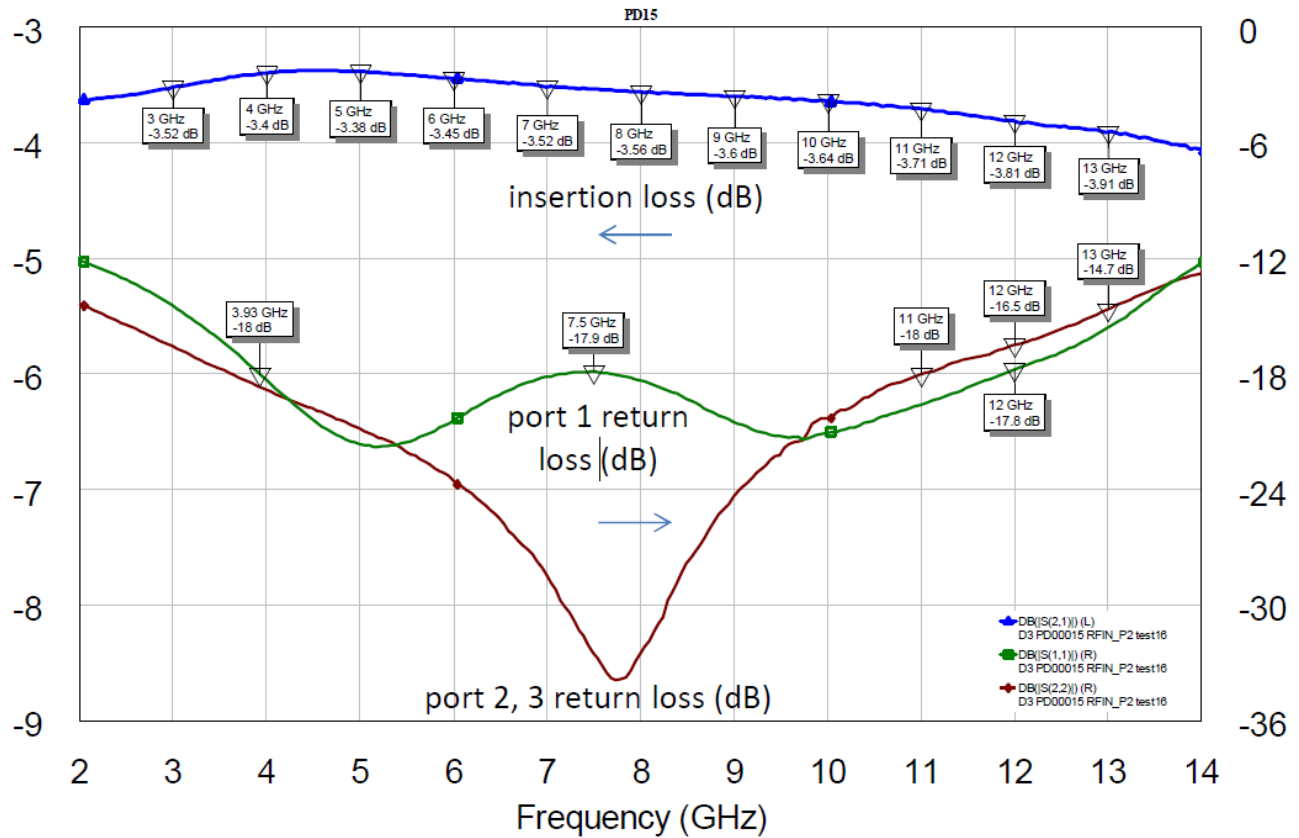

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Typical Performance Curves

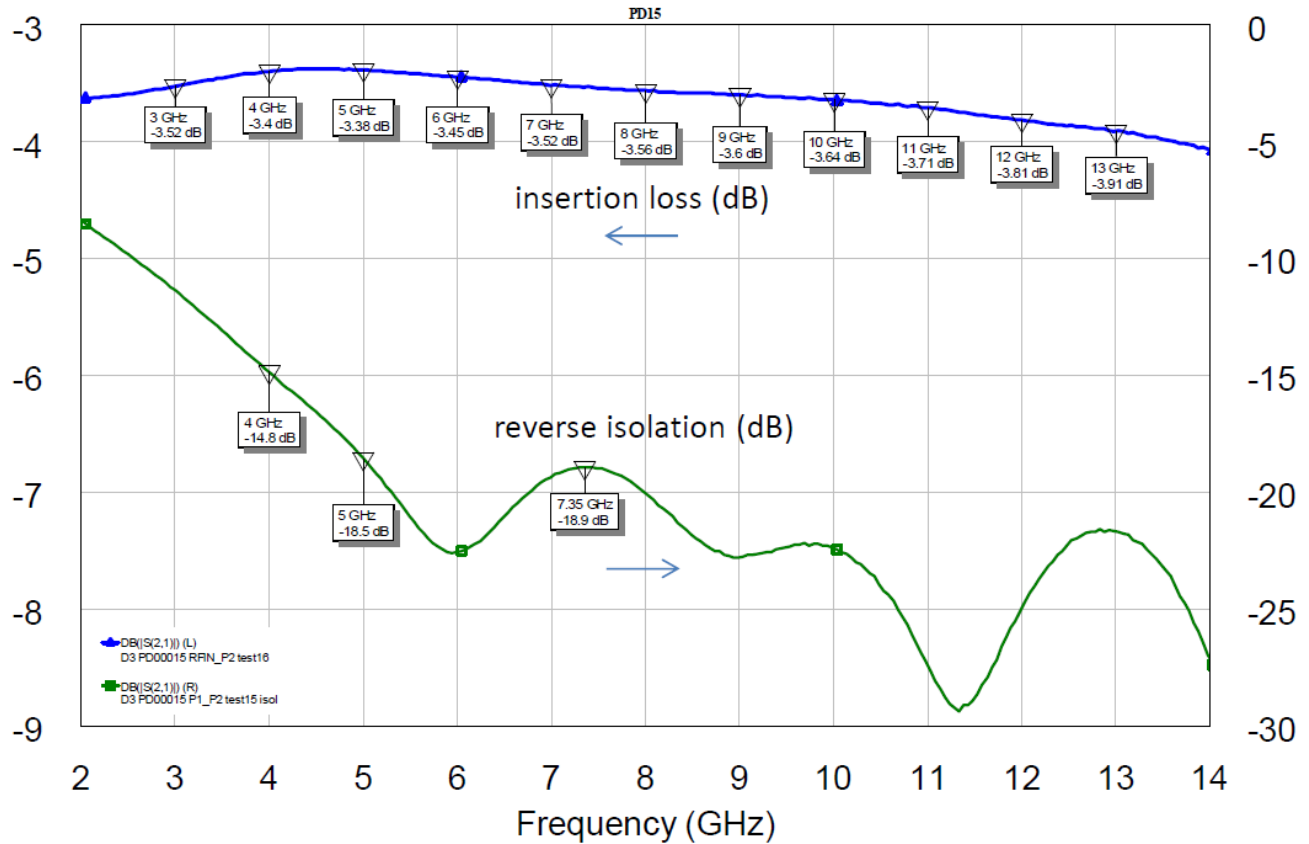

Measured RF Insertion Loss*, & In / Out Return Loss (dB)

* Note: Insertion loss (from common arm to either output port) is 0.1 - 0.2 dB less than shown in the plot; fixture losses were not fully de-embedded

External I/O Microstrip Flare Dimensions (on 5-mil Alumina) and I/O Bond Wire Inductances for Optimum Insertion and Return Loss Performance

S-parameters can be supplied at DIE level such that optimal flare dimensions can be made for the substrate connection medium used (if different from 5-mil Alumina).

Pad Flare Dimension	Flare Length x-dim, (μm)	Flare Width y-dim, (μm)	Wire Inductance (nH)	Wire Length (μm)	# of Wires
Port 1 Common Flare	607	310	0.59	1220	2
Port 2 Pad Flare	90	85	0.41	890	2
Port 3 Pad Flare	90	85	0.41	890	2

Notes:

- To achieve bond wire inductance noted, bond the number of wires shown in parallel from each external flare to each associated MMIC RF bond pad as shown above.
- Gold Wire Details:
 - Diameter: 25.4 μm (1 mil)
 - Spacing: 4 mils ($\sim 100 \mu\text{m}$) typical
 - Height above Ground: 8 mils ($\sim 200 \mu\text{m}$) typical (wedge bonds)
- Wire Length is total length if the wire were made perfectly straight.
- Ports 1 & 2 can be connected at an angle between 0 and 90 degrees.
