

Features

- Surface Mount Limiter in 8 mm x 5 mm x 2.5 mm Package
- Incorporates PIN Limiter & Schottky Diodes
- DC Blocks & DC Return
- Higher Average Power Handling than Plastic: 50 W CW Power
- Lower Insertion Loss: 0.8 dB
- Lower Flat Leakage Power: 17 dB
- RoHS* Compliant

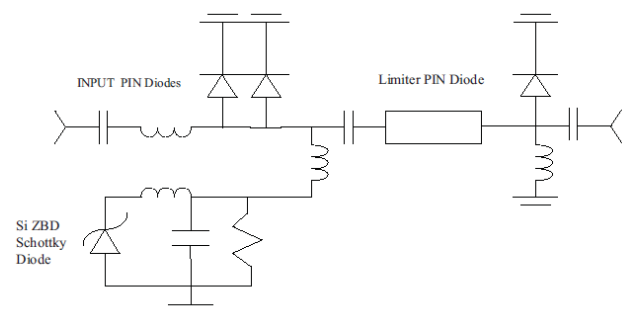

Description

The LM102202-H-C-301 surface mount silicon PIN diode limiter is manufactured using proven hybrid manufacturing process incorporating PIN diodes and passive devices integrated within a ceramic substrate. This low profile, compact, surface mount component, (8 mm L x 5 mm W x 2.5 mm H) offers superior low and high signal performance to comparable MMIC devices in QFN packages. The limiter modules are designed to optimize small signal insertion loss, noise figure and high signal flat leakage performance in a compact, surface mount package. Using PIN diodes with lower thermal resistance (<math><10^{\circ}\text{C}/\text{W}</math>), and a De-coupled Schottky detector network as a current source, RF CW incident power levels of 47 dBm and RF peak incident power levels of 53 dBm @ 20 μs RF pulse width, 1% duty cycle are very achievable. In addition, this design concept provides lower flat leakage power (<math><17\text{ dBm}</math>) and lower spike leakage energy (<math><0.5\text{ Ergs}</math>) for superior LNA protection.

This LM102202-H-C-301 limiter is ideal for octave band radar applications, requiring high volume, surface mount, solder re-flow manufacturing. These products are durable, reliable, and capable of meeting all military, commercial, and industrial environments. These devices are RoHS compliant and are available in tube or tape-reel.

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- MACOM does not recommend sustained operation near these survivability limits.

Handling Procedures

Please observe the following precautions to avoid damage:

Static and Moisture Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 0 (HBM) devices.

The moisture sensitivity level rating for this device is MSL 1.

Environmental Capabilities

This limiter is capable of meeting the environmental requirements of MIL-STD-750 and MIL-STD-202.

Thermal Grounding Caution

Product engineering dictates that the LM family of high power limiters require proper heat sinking for high power applications >40 dBm (10 W). MACOM recommends using the part number PNMN13881 heat sink block which was developed for LM family.

Assembly Instructions

The LM102202-H-C-301 limiters are capable of being placed onto circuit boards with pick and place manufacturing equipment from tube or tape & reel dispensing. The devices are attached to the circuit board using conventional solder re-flow or wave soldering procedures with RoHS type or Sn 60 / Pb 40 type solders per Table I & Graph I Time-Temperature recommended profile.

RF Circuit Solder Footprint, case style 301 (CS301)

Recommended RF circuit is Rogers R04350B, 10 mils thick.
