Features

- Low Noise Figure: 1.2 dB
- High Input IP3: +18 dBm at 8 V, 60 mA bias
  +6.5 dBm at 3 V, 20 mA bias
- High Gain: 15 dB
- Single Supply: +3 to +8 VDC
- Adjustable current: 20 to 80 mA with external resistor
- Lead-Free SOIC-8 Package
- 100% Matte Tin Plating over Copper
- Halogen-Free “Green” Mold Compound
- 260°C Reflow Compatible
- RoHS* Compliant Version of AM50-0003

Description

M/A-COM’s MAAL-008091 is a high dynamic range, GaAs MMIC, low noise amplifier in a lead-free SOIC-8, surface mount plastic package. It employs external input matching to obtain optimum noise figure performance and operating frequency flexibility.

The MAAL-008091 also features flexible biasing to control the current consumption vs. dynamic range trade-off. The MAAL-008091 can operate from any supply voltage in the 3 V to 8 V range. Its current can be controlled over a range of 20 mA to 80 mA with an external resistor.

The MAAL-008091 is ideally suited for use where low noise figure, high gain, high dynamic range, and low power consumption are required. Typical applications include receiver front ends in AMPS, GSM, and ETACS base stations. It is also useful as a gain block, buffer, driver, and IF amplifier in both fixed and portable cellular and 900 MHz ISM systems.

The MAAL-008091 is fabricated using a low-cost 0.5-micron gate length GaAs process. The process features full passivation for increased performance reliability.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

High Dynamic Range Low Noise Amplifier
800 - 1000 MHz

Revision V2

Recommended PCB Configuration

Cross Section View

The PCB dielectric between RF traces and RF ground layers should be chosen to reduce RF discontinuities between 50 Ω lines and package pins. M/A-COM recommends an FR-4 dielectric thickness of 0.008” (0.20 mm) yielding a 50 Ω line width of 0.015” (0.38 mm). The recommended RF metalization is 1 ounce copper.

7. All external components are readily available, low cost surface mount components.
8. Pin 2 allows use of an external resistor to ground for optional, higher current. For 20 mA operation, no resistor is used.

For $I_{DD} \approx 40$ mA, $R2 = 43$ ohms;
$I_{DD} \approx 60$ mA, $R2 = 15$ ohms;
$I_{DD} \approx 80$ mA, $R2 = 10$ ohms.
Typical Performance Curves:

- $T_A = +25^\circ C$, $Z_0 = 50 \, \Omega$, $V_{DD} = 5 \, V$, $I_{DD} = 60 \, mA$ unless otherwise specified
