Low Noise Amplifier
0.5 - 3 GHz

Features
- Low Noise Figure
- Excellent Input Return Loss
- Single Voltage Bias 4 V
- Integrated Active Bias Circuit
- Current Adjustable 20 - 80 mA with an
  External Resistor
- High Linearity, OIP3 >32 dBm
- 8-Lead Hermetic Package
- RoHS* Compliant

Description
The MAAL-010705-CR10 is a high dynamic range
single stage MMIC LNA with excellent linearity and
low noise figure designed for operation from 0.5 to
3 GHz. The LNA is packaged in an RoHS compliant,
8-lead hermetically sealed ceramic package.

This MMIC has an integrated active bias circuit
allowing direct connection to 4 V voltage supply and
minimizing variation over temperature and process.
The bias current and gain can be set with external
resistors to allow the user to customize the current
and gain value to fit the application.

The MAAL-010705-CR10 offers less than 0.7 dB
noise figure, more than 32 dBm OIP3 and 20 dB
output return loss. The excellent match, low noise
figure and high OIP3 along with the flexibility of
setting current and gain make this LNA ideal UHF, L,
and S-band satellite applications.

3. Exceeding any one or combination of these limits may cause permanent damage to this device.
4. MACOM does not recommend sustained operation near these survivability limits.
5. Typical thermal resistance (\(\Theta_c\)) = 45°C/W.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
Typical Performance Curves: 4 V (over temperature)

Bias Information

V_{\text{BIAS}} and V_D are separate connections on the evaluation board to give the option of varying I_D without changing R4. They can be connected together to a single voltage supply during the measurement and in the final layout implementation of the PCB. If two different voltage supplies are used then apply V_D first and then V_{\text{BIAS}} to turn on the LNA. To turn off the LNA disconnect V_{\text{BIAS}} first and then V_D. R3 is varied to obtain different levels of gain. R4 is varied to change the drain current I_D.

Schematic
**Lead-Free Hermetic CR10 Package†**

All dimensions are in inches.

† Reference Application Note S2083 for lead-free solder reflow recommendations.

Meets JEDEC moisture sensitivity level 1 requirements.

Plating is Au over Ni.
