Low Noise Amplifier
1.4-4.0 GHz

Features
- Low Noise Figure
- Excellent Input Return Loss
- Single Voltage Bias 3 V
- Integrated Active Bias Circuit
- Current Adjustable 20-80 mA with an
  External Resistor
- High Linearity, OIP3 > 34 dBm
- Small Package: 2 mm PDFN-8LD
- RoHS* Compliant and 260°C Reflow Compatible

Description
The MAAL-010706 is a high dynamic range single
stage MMIC LNA with excellent linearity and low
noise figure designed for operation from 1.4 to 4.0
GHz. The LNA is packaged in an RoHS compliant
leadless 2 mm 8-lead PDFN package.

This MMIC has an integrated active bias circuit
allowing direct connection to +3 V voltage supply
and minimizing variation over temperature and
process. The bias current and gain can be set with
external resistors to allow the user to customize the
current and gain value to fit the application.

The MAAL-010706 offers less than 0.7 dB noise
figure, more than 34 dBm OIP3 and 20 dB input
return loss. The excellent input match, low noise
figure and high OIP3 along with the flexibility of
setting current and gain make this LNA ideal for 3G
and 4G cellular infrastructure applications.

For optimum performance below 1.4 GHz the
MAAL-010705 is recommended. The MAAL-010706
and MAAL-010705 share the package type and footprint.

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.
6. Typical thermal resistance (\(\Theta_{jc}\)) = 45 ºC/W.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 1A devices.
Typical Performance Curves: 4 V (over current)

Legend:
- Red: Id(mA) = 20
- Black: Id(mA) = 40
- Blue: Id(mA) = 60
- Green: Id(mA) = 80

V_{BIAS} and V_D are separate connections on the evaluation board to give the option of varying I_D without changing R4. They can be connected together to a single voltage supply during the measurement and in the final layout implementation of the PCB. If two different voltage supplies are used then apply V_D first and then V_{BIAS} to turn on the LNA. To turn off the LNA disconnect V_{BIAS} first and then V_D. R3 is varied to obtain different levels of gain. R4 is varied to change the drain current I_D.
Lead-Free 2 mm 8-Lead PDFN†

† Reference Application Note S2083 for lead-free solder reflow recommendations.
Meets JEDEC moisture sensitivity level 1 requirements.
