8. Ground plane conductor should be removed under the corners of the package, as shown.

Biasing - The device is operated with a single, positive bias supply. The device performance is insensitive to changes in bias condition; however, gain and power handling can be slightly improved with higher bias conditions without significantly affecting the noise figure performance. Typical biasing conditions within the specified performance ranges are $V_D = 3 \, \text{V}$, $50 \, \text{mA}$, $V_D = 3.3 \, \text{V}$, $55 \, \text{mA}$, $V_D = 3.6 \, \text{V}$, $60 \, \text{mA}$.
