Ultra Low Phase Noise Amplifier
2 - 18 GHz

Features
- Wideband Performance
- Noise Figure: 3.5 dB @ 10 GHz
- Phase Noise: -165 dBc/Hz @ 100 kHz Offset
- Bias Voltage: 5 V
- Bias Current: 60 mA
- 50 Ω Matched Input / Output
- Positive Voltage Only
- Lead-Free 5 mm 32-lead PQFN Package
- RoHS* Compliant

Description
The MAAL-011151 is an easy to use, wideband low noise distributed amplifier in a lead-free 5 mm 32-lead PQFN package. It operates from 2 to 18 GHz and provides 15 dB of linear gain, 19 dBm of P1dB, and 3.5 dB of noise figure at 10 GHz. The input and output are fully matched to 50 Ω with typical return loss >10 dB.

The RF input and RF output ports are DC blocked. Amplifier control is available through the use of a control circuit.

This product is fabricated using a low phase noise HBT process which features full passivation for enhanced reliability.

The MAAL-011151 can be used as a low noise amplifier stage for signal generation applications. This device is ideally suited for Test and Measurement, EW, ECM, and Radar applications where ultra low phase noise and drive power is required.

4. Reference detailed bias conditions on page 3.
5. MACOM does not recommend sustained operation at power levels above 3 dB compression.

### Maximum Operating Conditions

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Rating</th>
</tr>
</thead>
</table>
| **Input Power**    | $P_{IN} < 3$ dBm  
                    | Compression Point |
| **ICQ**            | 90 mA  |
| **Junction Temperature$^6,7$** | 130°C |
| **Operating Temperature** | $-40^\circ C$ to $+85^\circ C$ |

6. Operating at nominal conditions with junction temperature ≤ 130°C will ensure MTTF > $1 \times 10^6$ hours.
7. Junction Temperature ($T_J = T_C + \Theta_{JC} \times (V * I) - (P_{OUT} - P_{IN})$). Typical thermal resistance ($\Theta_{JC}$) = 120°C/W.
   a) For $T_C = +25^\circ C$  
      $T_J = +72^\circ C @ 5$ V, 98 mA, $P_{OUT} = 20$ dBm, $P_{IN} = 4.5$ dBm
   b) For $T_C = +85^\circ C$  
      $T_J = 129^\circ C @ 5$ V, 88 mA, $P_{OUT} = 19$ dBm, $P_{IN} = 4.5$ dBm

</tr>
</tbody>
</table>

8. Exceeding any one or combination of these limits may cause permanent damage to this device.
9. MACOM does not recommend sustained operation near these survivability limits.
10. Junction temperature directly effects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.
**Ultra Low Phase Noise Amplifier**

**2 - 18 GHz**

### Application Schematic

![Application Schematic Diagram]

### Operating Conditions

Recommended biasing conditions are VCC = 5 V applied to pin 14 (VB3) and pin 2 (VCC). Apply amplifier control (VCT) through the offset resistors (R1, R2) to pin 15 (VB2) and pin 18 (VB1) according to the application schematic shown. Setting VCT = 5 V will turn on the amplifier (ICQ ~ 60 mA from VCC = 5 V). Setting VCT = 0 V will turn off the amplifier. VB1 and VB2 will draw < 2 mA (ICT) from VCT = 5 V. All DC supplies need to be low noise to prevent degradation of the amplifier phase noise.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.

Lead-Free 5 mm 32-Lead PQFN Package†

† Reference Application Note S2083 for lead-free solder reflow recommendations.
Meets JEDEC moisture sensitivity level 1 requirements.
Plating is NiPdAuAg.
