Description

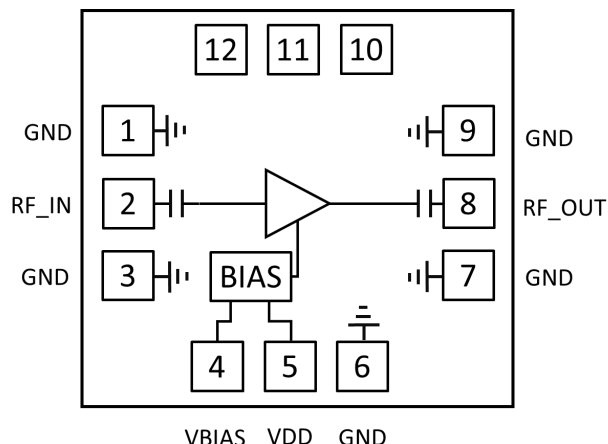

The MAAL-011286 is an easy to use low noise amplifier. It operates from 15 to 24 GHz and provides 1.5 dB noise figure, 27 dB gain and a P1dB of +19 dBm. The input and output are fully matched to 50 Ω with typical return loss >12 dB.

This product is fabricated using a GaAs pHEMT process which features full passivation for enhanced reliability.

This amplifier can be used as a low noise amplifier stage or as a driver stage in higher power applications. This device is ideally suited for Ka-band downlink satellite communication systems.

The MAAL-011286 is also available in die form under MAAL-011286-DIE part number.

Handling Procedures

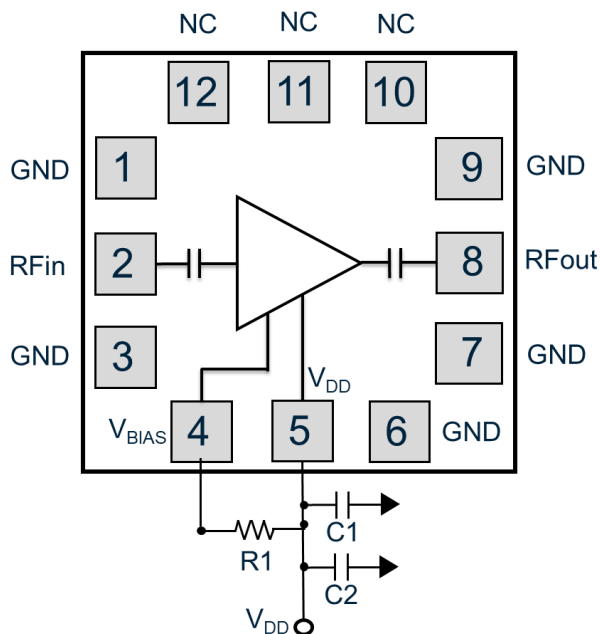

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1A HBM (250 V), Class C2a CDM (500 V) devices.

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. MACOM does not recommend sustained operation near these survivability limits.
6. Operating at nominal conditions with $T_J \leq +150^\circ\text{C}$ will ensure MTTF > 1×10^6 hours.
7. Junction Temperature (T_J) = $T_C + \Theta_{jc} * (V * I)$
Typical thermal resistance (Θ_{jc}) = 66.5 °C/W.
 - a) For $T_C = +25^\circ\text{C}$,
 $T_J = 50.6^\circ\text{C} @ 3.5\text{ V}, 110\text{ mA}$
 - b) For $T_C = +85^\circ\text{C}$,
 $T_J = 110.6^\circ\text{C} @ 3.5\text{ V}, 110\text{ mA}$
