

GaN Low Noise Amplifier

8 - 12 GHz

MAAL-FR1250

Rev. V1

Features

- Gain: 24 dB
- Noise: 1.4 dB
- Output P1dB: 19.5 dBm @ 10 GHz
- Output Saturated Power: 21 dBm @ 10 GHz
- Power Consumption: 1.2 W
- Voltage: +8 V
- Lead-Free 5 mm QFN - 24 Leads

Applications

- Satellite Communication
- Radar

Description

The MAAL-FR1250 is a 3-stage low noise amplifier (LNA) designed to operate from 8 - 12 GHz with 1.4 dB of noise figure and 24 dB of gain at 10 GHz. This LNA is matched to 50 Ω at both input and output ports.

The MAAL-FR1250 has a single positive voltage bias which includes a DC current regulation. This device is ideally suited to satellite communication and radar applications.

The MAAL-FR1250 is manufactured using a high performance 100 nm gate length GaN on Si HEMT power technology. The MMIC uses gold bonding pads and backside metallization and is protected with silicon nitride passivation to obtain the highest level of reliability.

Functional Schematic

Pin Configuration³

Pin #	Function
1,5,6,7,8,9,10,11,12,13,14,18,19,20, 21,24	No Connection
2,4,15,17,23	Ground
3	RFIN
22	VD
16	RFOUT
-	Paddle ⁴

3. MACOM recommends connecting unused package pins to ground.

4. The exposed pad centered on the package bottom must be connected to RF and DC ground.

Ordering Information^{1,2}

Part Number	Package
MAAL-FR1250	Bulk
MAAL-FR1250-TR0500	500 part reel
MAAL-FR1250-001SMB	Sample Board

1. Reference Application Note M513 for reel size information.

2. MAAL-FR1250 also exists in die form: MAAL-011250-DIE.

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

Electrical Specifications: Freq. = 8 - 12 GHz, $T_A = +25^\circ\text{C}$, $V_D = +8\text{ V}$, $Z_0 = 50\ \Omega$

Parameter	Test Conditions	Units	Min.	Typ.	Max.
Gain	—	dB	19	24	—
Input Return Loss	—	dB	—	-10	—
Output Return Loss	—	dB	—	-10	—
Noise Figure	—	dB	—	1.4	2.2
Drain Current	—	mA	—	150	—
Output P1dB	@ 10 GHz	dBm	—	19.5	—
Output Saturated Power	@ 10 GHz	dBm	—	21	—
Output IP3	Tone Spacing $\Delta f = 1\text{ MHz}$ @ 10 GHz	dBm	—	32	—

Absolute Maximum Ratings^{5,6}

Parameter	Absolute Maximum
Input RF port (1 minute at CW)	33 dBm
Operating Voltage	20 V
Junction Temperature ^{7,8}	+200°C
Operating Temperature	-40°C to +85°C
Storage Temperature	-40°C to +150°C

5. Exceeding any one or combination of these limits may cause permanent damage to this device.
6. MACOM does not recommend sustained operation near these survivability limits.
7. Operating at nominal conditions with $T_J \leq +200^\circ\text{C}$ will ensure $\text{MTTF} > 1 \times 10^9$ hours.
8. Junction Temperature (T_J) = $T_C + \Theta_{jc} * (V * I)$
 Typical thermal resistance (Θ_{jc}) = 31.6 °C/W.
 a) For $T_C = +25^\circ\text{C}$,
 $T_J = 62.9^\circ\text{C}$ @ 8 V, 150 mA
 b) For $T_C = +85^\circ\text{C}$,
 $T_J = 129.9^\circ\text{C}$ @ 8 V, 145 mA

Handling Procedures

Please observe the following precautions to avoid damage:

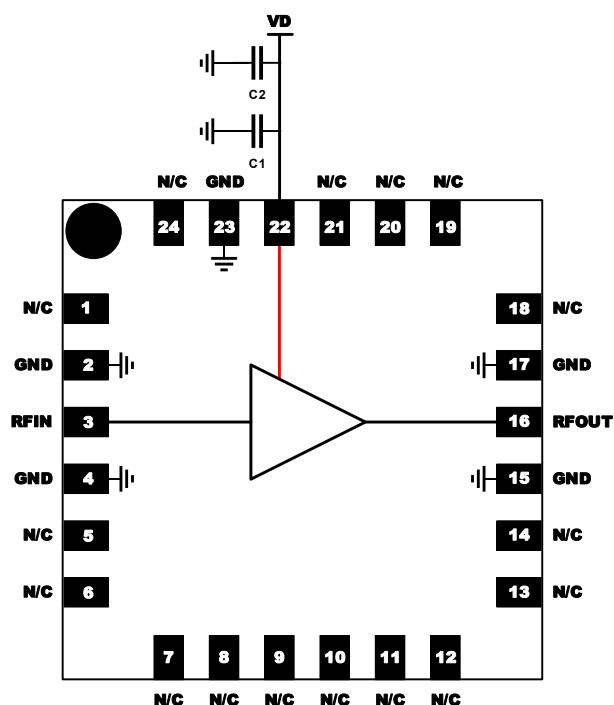

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Biasing Procedure

Biasing UP
Set I_D limit to 200 mA.
Ensure voltages are at 0 before turning on DC supply.
Set V_D to +8 V.
Ensure $I_D \approx 150\text{ mA}$.

Biasing Down
Set V_D to 0 V.
Turn off DC supply.

Lead-Free 5 mm 24-Lead PQFN[†]

[†] Reference Application Note S2083 for lead-free solder reflow recommendations.
 Meets JEDEC moisture sensitivity level 1 requirements.
 Plating is 100% matte tin over copper.
