Variable Gain Amplifier with Analog Control
400 - 2700 MHz

Features
- Wide Frequency Range
- +42 dBm Output IP3
- 25.5 dB Gain at 2140 MHz
- 26.5 dB Attenuation Range
- Lead-Free 4 mm, 24-Lead PQFN Package
- RoHS* Compliant and 260°C Reflow Compatible

Description
The MAAM-009320 is a variable gain amplifier with 26.5 dB of gain control at 2.14 GHz. It has good input IP3 performance over the full attenuation range. External matching components are used to set the center frequency and achieve the return loss performance. The analog control is accomplished through a single control pin of 0 to +3V.

The 4 mm PQFN package is RoHS compliant and compatible with reflow temperatures to 260°C. Applications include transceivers for cellular infrastructure.

Ordering Information

<td></td>
<td></td>
</tr>
</tbody>
</table>

3. For optimum RF performance, all N/C’s should be terminated to ground.
4. The exposed pad centered on the package bottom must be connected to RF and DC ground.

</tbody>
</table>

8. Exceeding any one or combination of these limits may cause permanent damage to this device.
9. M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.
10. Junction Temperature \( (T_J) = T_A + \Theta_{jc} \times ((V + I) - (P_{OUT} - P_{IN})) \)
11. Stage 1 typical thermal resistance \( (\Theta_{jc}) = 106.5^\circ \text{C/W} \)
12. Stage 3 typical thermal resistance \( (\Theta_{jc}) = 68.6^\circ \text{C/W} \)

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 1A devices.
