MAAM-011101

Ultra small Broadband General Purpose Amplifier
4 - 20 GHz

Features
- Gain: 16 dB
- Flatness: ± 2 dB
- 50 Ω match in and out
- P1dB: +18 dBm @ 14 GHz
- Single DC supply, +5 V to +12 V, 45 mA
- Lead-Free 1.5 x 1.2 mm 6-Lead TDFN package
- Halogen-Free “Green” Mold Compound
- RoHS* Compliant and 260°C Reflow Compatible

Description
The MAAM-011101 operates from 4 to 20 GHz and features 16 dB typical gain and +18 dBm of output power. The input and output are fully matched to 50 Ω with a typical return loss better than 12 dB. Small signal linearity is typically +30 dBm and reverse isolation better than 28 dB. This device requires a minimum of +5V, typically +8V, and maximum +10V for standard operation. Typical current is 45 mA.

Typical usage is a system buffer amplifier, gain block, mixer LO driver, power amplifier driver requiring small size and high performance. Typical applications are for WiFi, WiMAX, Point-to-Point radios, IMS, EW, and Aerospace and Defense.

The MAAM-011101 is housed in a leadless 1.5 x 1.2 mm package that is small yet can be handled and placed with standard pick and place assembly equipment. It is fabricated using a GaAs process which features full passivation for increased performance and reliability.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1A devices.

Evaluation Board

Application Information

The MAAM-011101 is designed to be easy to use yet high performance. The ultra small size, no matching, and simple bias allows easy placement on any system board.

LO Buffer applications:
The MAAM-011101 is good as a LO buffer since it has excellent isolation, selectable power output, low phase noise, and 50 Ω match (even under heavy drive). It is designed to deliver saturated output levels up to +20 dBm common to driving mixer configurations. It is typically used in conjunction with filters or splitters after the VCO or PLL.

PA Driver applications:
The MAAM-011101 makes a very good low cost driver before the transmit power amplifier. Set typically 7 dB backed off P1dB as a linear driver, it still delivers up to +12 dBm. Often cascaded in series with an attenuator, it allows gain control with little pulling due to mis-match. The low gain expansion allows little AM-to-AM distortion.

Grounding:
It is recommended that the total ground (common mode) inductance not exceed 0.03 nH (30 pH). This is equivalent to at least four 8 mil (200 u) vias per 8 mil board (200 u) be place under the device to ground

DC Bias Tee:
To bias properly, a DC voltage must be applied at the output pin. Typically this is down with a 2 element bias network that consists of a choke and a DC blocking capacitor. We recommend a high Q inductor for the choke and quality capacitor for the DC block.
