

Driver Amplifier

5 - 20 GHz

MAAM-011289-DIE

Rev. V1

Features

- Gain: 15 dB
- Saturated Power: 22 dBm
- Output IP3: 31 dBm
- High Reverse Isolation: 47 dB
- 50 Ω Matched Input and Output
- Integrated Capacitors on RF Input and Output
- +5 V Supply @ 100 mA
- Die Size 1.42 \times 0.80 \times 0.10 mm
- RoHS* Compliant

Applications

- Microwave Radio
- VSAT
- Aerospace & Defense
- Test and Measurement

Description

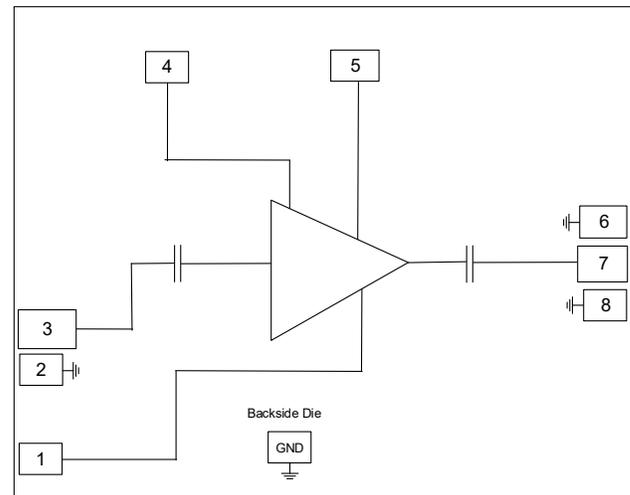

The MAAM-011289-DIE is a 5 - 20 GHz MMIC amplifier with 15 dB small signal gain, a P_{SAT} of 22 dBm and reverse isolation of 47 dB. This bare-die component requires only a single positive power supply.

All plotted data is taken with the chip connected via two 0.025 mm (1 mil) wire bonds of minimal length 0.31 mm (12 mils) on the RF_{IN} and RF_{OUT} ports.

Ordering Information

Part Number	Package
MAAM-011289-DIE	DIE in Gel Pack

Functional Schematic

Pad Configuration

Pad #	Function	Description
1	V_G	Gate Voltage Not Used
2, 6, 8	GND / NC	Ground / No Connection
3	RF _{IN}	RF Input
4	V_{D1}	Drain Voltage 1
5	V_{D2}	Drain Voltage 2
7	RF _{OUT}	RF Output
Paddle ¹	GND	Ground Paddle

1. The backside of the die must be connected to RF, DC and thermal ground.

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

Absolute Maximum Ratings^{2,3}

Parameter	Absolute Maximum
RF Power In	15 dBm
V _{DD} Supply Voltage	6 V
Supply Current	160 mA
Junction Temperature ^{4,5}	+150°C
Operating Temperature	-40C to +85°C
Storage Temperature	-65°C to +165°C

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- MACOM does not recommend sustained operation near these survivability limits.
- Operating at nominal conditions with $T_J \leq +150^\circ\text{C}$ will ensure $\text{MTTF} > 1 \times 10^6$ hours.
- Junction Temperature (T_J) = $T_C + \Theta_{jc} * (V * I)$
 Typical thermal resistance (Θ_{jc}) = 82 °C/W.
 - For $T_C = +25^\circ\text{C}$,
 $T_J = 66^\circ\text{C} @ 5 \text{ V}, 100 \text{ mA}$
 - For $T_C = +85^\circ\text{C}$,
 $T_J = 134^\circ\text{C} @ 5 \text{ V}, 120 \text{ mA}$

Operating Conditions

Recommended biasing conditions are $V_{D1,2} = 5 \text{ V}$ and $V_G = \text{open circuit}$.

Simply perform the following for bias:

- Set $V_G = \text{Open Circuit}$
- Set $V_{D1,2} = 5 \text{ V}$

DC blocking is not required on the RF input or RF output since blocking capacitors are provided internally. Use 0.01 and 1 μF bypass capacitors on the $V_{D1,2}$ nodes and a 0.01 μF capacitor on the V_G node. Place the 0.01 μF bypass capacitors as close as possible to the chip.

Parts List

Part	Value	Case Style
C1, C3	0.01 μF	0402
C2	1 μF	0402

Maximum Operation Conditions

Parameter	Maximum
RF Power In	10 dBm
V _{DD} Supply Voltage	4 - 5 V
Supply Current	140 mA
Junction Temperature ^{4,5}	+150°C
Operating Temperature	-40C to +85°C

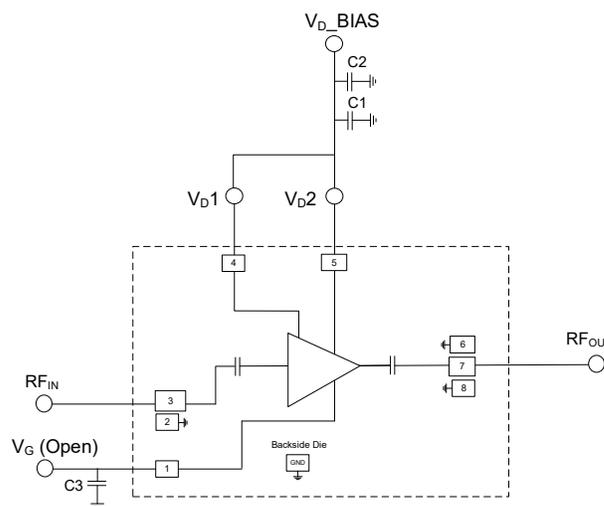

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 1B greater than 500 V HBM devices.

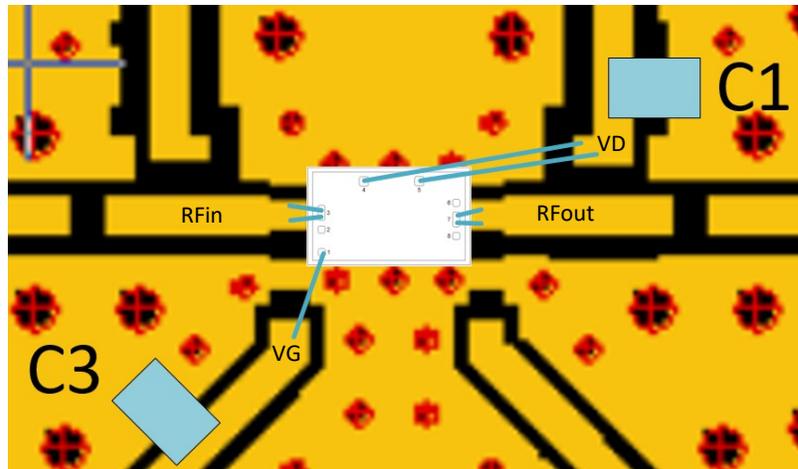

Application Schematic

Recommended Board Layout and Die Bonding Close Up

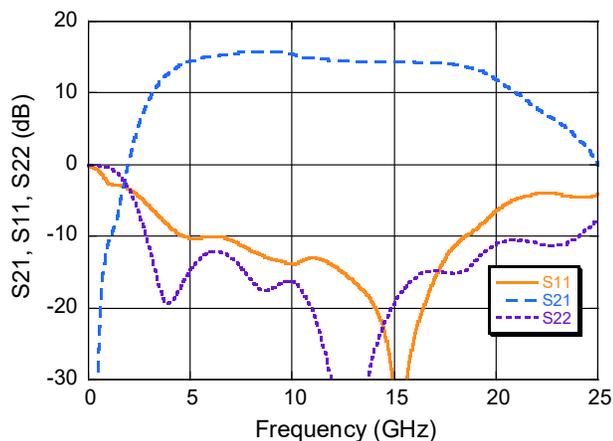

8 mils Rogers RO4003 with 1/2 oz. copper. Use conductive silver epoxy or AuSn eutectic for die attach and 1 mil diameter Au wire for wire bonding. Use copper filled and plated over vias under die for RF, DC and thermal grounding.

The s2p file downloadable from our website is directly probed to the die and does not include the effect of bond wires.
