

# MAAM71100

## GaAs MMIC Power Amplifier 7.0 - 11.0 GHz

Rev. V6

### Features

- +31 dBm Typical Saturated Power
- 18 dB Typical Gain
- 30% Typical Power Added Efficiency
- On-Chip Bias Network
- DC Decoupled RF Input and Output

### Description

The MAAM71100 is a GaAs MMIC two stage high efficiency power amplifier. The MAAM71100 is a fully monolithic design for operation in 50  $\Omega$  systems, with an on-chip negative bias network which eliminates the need for external bias circuitry.

### Die

### Ordering Information <sup>1</sup>

Part Number	Package
MAAM71100	Die

1. Die quantity varies.

### Absolute Maximum Ratings <sup>2</sup>

Parameter	Absolute Maximum
$V_{DD}$	+10 V
$V_{GG}$	-5 V
Input Power	+23 dBm
Operating Channel Temperature	+150°C
Storage Temperature	-65°C to +150°C

2. Exceeding any one or combination of these limits may cause permanent damage to this device.

### Schematic

## GaAs MMIC Power Amplifier 7.0 - 11.0 GHz

Rev. V6

**Electrical Specifications:  $T_A = 25^\circ\text{C}$ ,  $Z_0 = 50 \Omega$ ,  $V_{DD} = +8 \text{ V}$ ,  $V_{GG} = -1.2 \text{ V Typ}$**

Parameter	Test Conditions	Units	Min.	Typ.	Max.
Gain	—	dB	14	18	—
Input VSWR	—	Ratio	—	2.0:1	—
Output VSWR				4.5:1	
Saturated Power Output	Input Power = +18 dBm	dBm	—	+31	—
Output Power at 1 dB Gain Compression	—	dBm	—	+28	—
Third Order Intercept	—	dBm	—	+38	—
Reverse Isolation	—	dB	—	30	—
Bias Current	$I_{DSQ}$ (No RF) $I_{DD}$ $P_{in} = +18 \text{ dBm}$	mA	—	520	—
			—	750	—
Thermal Resistance	—	$^\circ\text{C/W}$	—	12	—

### Typical Performance Curves

**Linear Gain and Input Return Loss vs. Frequency**

**Output Power and Power added efficiency vs. Frequency @  $P_{in} = +18 \text{ dBm}$**

**Output Power and Power added efficiency vs. Input Power @ 9 GHz**

### Handling Procedures

Permanent damage to the MAAM71100 may occur if the following precautions are not adhered to:

- Cleanliness - The MAAM71100 should be handled in a clean environment. DO NOT attempt to clean assembly after the MAAM71100 is installed.
- Static Sensitivity - All die handling equipment and personnel should comply with DOD-STD-1686 Class I.
- Transients - Avoid instrument and power supply transients while bias is connected to the MAAM71100. Use shielded signal and bias cables to minimize inductive pick-up.
- General Handling - DO NOT touch the surface of the die. It is recommended that the MAAM71100 die be handled along the long side with a sharp pair of tweezers.

### Mounting

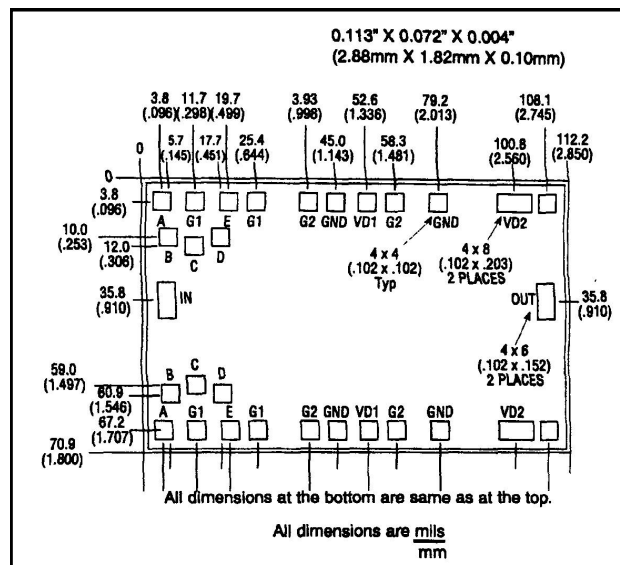

The MAAM71100 is back-metallized with Pd/Ni/Au (100/1, 000/30,000Å) metallization. It is recommended that the die be mounted with Au/Sn eutectic preforms. The attachment surface should be clean and flat.

- An 80/20 preform is recommended with a work surface temperature of approximately 255°C and a tool temperature of 265°C. When hot 90/5 nitrogen/hydrogen gas is applied, solder temperature should be approximately 290°C.
- DO NOT expose the MAAM71100 to a temperature greater than 320°C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

### Bonding

- Ball or wedge bond with 1.0 mil diameter gold wire of 3.0 mil x 0.5 mil ribbon. Thermosonic bonding with a nominal stage temperature of 150°C and a ball bonding force of 40 to 50 grams or wedge bonding force of 18 to 22 grams is recommended. Ultrasonic energy and time should be adjusted to the minimum levels necessary to achieve reliable bonds.
- Bonds should be started on the die and terminated on the package.
- Bonding pads are 4.0 x 4.0 mils minimum.

### Outline Drawing

### Typical Bias Configuration <sup>3,4,5</sup>

- Nominal bias is obtained by first connecting -1.2 volts to pads  $V_{G1}$  and  $V_{G2}$  followed by connecting +8 volts to pads  $V_{D1}$  and  $V_{D2}$  (note sequence).
- The recommended  $V_{DD}$  range is +6 to +9 volts.
- Optional on-chip resistor networks are used by connecting a nominal -5 volts to pad "A" and connecting pad "B", "C", "D", or "E" to pad  $V_{G1}$ ; and  $V_{G2}$ .
