**MAAP-010168**

**10 W Power Amplifier**

0.5 - 3 GHz

---

**Features**

- Saturated Output Power: 41 dBm
- Linear Gain: 24 dB
- Power Added Efficiency: 30% at $P_{SAT}$
- 50 Ω Input / Output Match
- Ceramic Flange Mount Package
- RoHS* Compliant and 260°C Re-flow Compatible

**Description**

The MAAP-010168 is a two stage MMIC power amplifier designed for broadband high power applications. It can be used as either a driver or an output stage amplifier. This device is fully matched input and output to 50 Ω which eliminates any sensitive external RF tuning components.

The device is packaged in a lead free 10-lead flanged hermetic package for high volume manufacturing.

The MAAP-010168 is fabricated using a fully passivated high reliability pHEMT process. The device provides excellent power added efficiency and gain.

---

1. Reference Application Note M567 for package handling and mounting procedure.

2. Flange is DC and RF ground.
3. RF Input & RF Output ports have shunt DC paths to ground. No External DC voltage should be applied to the RF ports.

---

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. MACOM does not recommend sustained operation near these survivability limits.
6. Operating at nominal conditions with T_{J} ≤ +150°C will ensure MTTF > 1 x 10^6 hours.
7. Junction Temperature (T_{J}) = T_{C} + \Theta_{JC} * ((V * I) - (P_{OUT} - P_{IN}))
   Typical thermal resistance (\Theta_{JC}) = 2.0°C/W
   a) For T_{C} = 25°C @ 1.5 GHz
      T_{J} = +80°C @ +10 V, 4 A, P_{OUT} = 41 dBm, P_{IN} = 21 dBm
   b) For T_{C} = 85°C @ 1.5 GHz
      T_{J} = +138°C @ +10 V, 3.9 A, P_{OUT} = 41 dBm, P_{IN} = 21 dBm

Operating the MAAP-010168
The MAAP-010168 is static sensitive. Please handle with care. To operate the device, follow these steps. Ramp down or shutdown in reverse order (gate bias on first and off last). All V_{GG} pins should have the same voltage applied at all times.

1. Apply V_{GG} (-1.5 V).
2. Apply V_{DD} (10.0 V Typical).
3. Set I_{DQ} by adjusting V_{GG}.
4. Apply RF_{IN}.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Sample Board Layout

MACOM Technology Solutions Inc. (MACOM) and its affiliates reserve the right to make changes to the product(s) or information contained herein without notice. Visit www.macom.com for additional data sheets and product information.
MAAP-010168 Recommended Layout

Below is the recommended layout for the MAAP-010168. For optimal stability MACOM recommends adding bias decoupling capacitors of 10 µF at the entry point of V_G and V_DD (At the DC connections Header PIN). It is also recommended to add shunt decoupling capacitors of 1 µF & 1000 pF at the gate and drain pins of MAAP-010168 as shown in the details A below.
MACOM can provide gerber files of the sample board layout upon request.

Typical Performance Curves

Max. Power Dissipation vs. Base Plate Temperature

Junction Temperature vs. Base Plate Temperature with 50 W Power Dissipation

8. Power dissipation should not exceed the maximum plot shown above to maintain $T_J < 150^\circ\text{C}$. It is recommended to monitor power dissipation and decrease power dissipation in the device as required.

Ceramic Flange Mount Package

† Reference Application Note M538 for lead-free solder reflow recommendations.
This is a high frequency, low thermal resistance package. The package consists of a cofired ceramic construction with a copper-tungsten base and iron-nickel-cobalt leads. The finish consists of electrolytic gold over nickel plate.
