Features
- Linear Gain: 27 dB
- Saturated Output Power: +39 dBm Pulsed
- 50 Ω Input / Output Match
- Lead-Free 5 mm 20-lead PQFN Package
- Halogen-Free “Green” Mold Compound
- RoHS* Compliant and 260°C Reflow Compatible

Description
The MAAP-010171 is a 2-stage, 8 W saturated S-band power amplifier in a 5mm 20 lead PQFN package, allowing easy assembly. This product is fully matched to 50 ohms on both the input and output. It can be used as a power amplifier stage or as a driver stage in high power pulsed applications.

It is ideally suited for Air Traffic Control, Weather, Military and S-band radar applications.

Each device is 100% RF tested to ensure performance compliance.

1. Reference Application Note M513 for reel size information.

2. MACOM recommends connecting unused package pins to ground.

3. The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.

Electrical Specifications:
Freq. 2.5 - 3.5 GHz, $V_{DD} = 9$ V Pulsed, 100 $\mu$s Pulse Width, 10% Duty Cycle, $Z_0 = 50$ $\Omega$

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 1A devices.

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. MACOM does not recommend sustained operation near these survivability limits.
6. Operating at nominal conditions with $T_J \leq 150^\circ$C will ensure $MTTF > 1 \times 10^6$ hours.
7. Junction Temperature ($T_J$) = $T_C + \Theta_{JC} \times (V \times I)$,
   Typical thermal resistance ($\Theta_{JC}$) = 5.75°C/W
Operating the MAAP-010171

To operate, follow these steps.

1. Apply $V_G$ between -1 V and -0.5 V to set IDQ to 1 A
2. Apply $V_{DD}$ Pulsed
3. Apply RF Power ON
4. The RF ports (pins 3 & 13) are not DC blocked. Do not apply DC voltage directly onto these pins.
5. Ramp down or shut down in reverse order.
Typical Performance Curves

**S-Parameters**

- Frequency (GHz) vs. S21, S11, S22

- Output Power, Pin = 19 dBm @ +25°C

- Output Power, Pin = 19 dBm @ -40°C

- Output Power, Pin = 19 dBm @ +85°C
