Power Amplifier, 8 W
5.2 - 5.9 GHz

Features
- Linear Gain: 20 dB
- Saturated Output Power: 39 dBm Pulsed
- 50 Ω Input / Output Match
- Lead-Free 5 mm 20-lead PQFN Package
- RoHS* Compliant

Applications
- Point-to-Point Radios
- C-Band Radar

Description
The MAAP-011027 is a 2-stage, 8 W saturated C-band power amplifier in a 5 mm 20 lead PQFN package, allowing for easy assembly. This product is fully matched to 50 ohms on both the input and output. It can be used as a power amplifier stage or as a driver stage in high power pulsed applications. Each device is 100% RF tested to ensure performance compliance.

2. MACOM recommends connecting unused package pins to ground.
3. The exposed pad centered on the package bottom must be connected to RF and DC ground.

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 1A devices.

---

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. MACOM does not recommend sustained operation near these survivability limits.
6. Operating at nominal conditions with $T_J \leq +150^\circ C$ will ensure $MTTF > 1 \times 10^6$ hours.
7. Junction Temperature ($T_J$) = $T_C + \Theta_{JC} \times (V \times I)$
   Typical CW thermal resistance ($\Theta_{JC}$) = 7.7°C/W

Operating the MAAP-011027

To operate the MAAP-011027, follow these steps.
Ramp down or shut down in reverse order.

1. Apply $V_G$ between -1 V and -0.5 V to set IDQ to 1 A
2. Apply RF Power ON
3. Apply $V_{DD}$ Pulsed
Power Amplifier, 8 W

Small Signal wideband performance

Power Dissipation vs. Case Temperature

Average dissipated power: \( P_{\text{DISS}} = P_{\text{DC}} + P_{\text{IN}} - P_{\text{OUT}} \) (all powers are average in Watts)

Average power is integrated over pulse period, for short pulses (not exceeding pulse width of 100 µs), average power can be approximated as \( P_{\text{AVERAGE}} = P_{\text{PEAK}} \times D \), where \( D \) is duty cycle.

For pulses wider than 100 µs self heating during pulse reduces allowable average dissipated power.
**Lead-Free 5 mm 20-Lead PQFN†**

† Reference Application Note S2083 for lead-free solder reflow recommendations.
Meets JEDEC moisture sensitivity level (MSL) 3 requirements.
Plating is 100% matte tin over copper.
