MAAP-011139-DIE

Power Amplifier, 4 W
28.5 - 31.0 GHz

Features
- High Gain: 24 dB @ 30 GHz
- P1dB: 34.5 dBm
- P_{SAT}: 36.5 dBm
- IM3 Level: -27 dBc @ P_{OUT} = 29 dBm/tone
- Power Added Efficiency: 23% @ P_{SAT}
- Return Loss: 10 dB
- Bare Die Dimensions: 3.1 x 2.8 x 0.05 mm
- RoHS* Compliant

Description
The MAAP-011139-DIE is a 4-stage, 4 W power amplifier in bare die form. This power amplifier operates from 28.5 to 31.0 GHz and provides 24 dB of linear gain, 4 W saturated output power, and 23% efficiency while biased at 6 V.

The MAAP-011139-DIE is a power amplifier ideally suited for VSAT communications.

This product is fabricated using a GaAs pHEMT device process which features full passivation for enhanced reliability.

</tbody>
</table>

4. Operating at nominal conditions with junction temperature ≤ +160°C will ensure MTTF > 1 x 10^6 hours.
5. Junction Temperature \((T_J) = T_C + \Theta_{JC} * (V * I) - (P_{OUT} - P_{IN})\)  
   Typical thermal resistance \((\Theta_{JC}) = 3.4°C/W.\)
   a) For \(T_C = +25°C\), \(T_J = +75°C @ 6 \) V, 3.2 A, \(P_{OUT} = 36.5\) dBm, \(P_{IN} = 17\) dBm
   b) For \(T_C = +85°C\), \(T_J = +133°C @ 6 \) V, 3.0 A, \(P_{OUT} = 36.0\) dBm, \(P_{IN} = 17\) dBm

Absolute Maximum Ratings\(^6,7\)

</tr>
</tbody>
</table>

6. Exceeding any one or combination of these limits may cause permanent damage to this device.
7. MACOM does not recommend sustained operation near these survivability limits.
8. Junction temperature directly effects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.

PCB Material Specifications

- Top Layer: 1/2 oz Copper Cladding, 0.017 mm thickness
- Dielectric Layer: Rogers RO4350B, 0.101 mm thickness
- Bottom Layer: 1/2 oz Copper Cladding, 0.017 mm thickness
- Finished overall thickness: 0.135 mm
Recommended Bonding Diagram and PCB Layout Detail:

For optimum power match, RF input and output microstrip lines require open stubs on the application board for bonding wire inductance compensation. Optimum bonding wire inductance for the RF I/O connection is 0.2 nH, and physical length for the gold bond wire (.001" dia.) is approximately 350 µm each for the two wire connection.
Application Information
The MAAP-011139 is designed to be easy to use yet high performance. The ultra small size and simple bias allow easy placement on system board. RF input and output ports are DC de-coupled internally.

Biasing conditions
Recommended biasing conditions are $V_D = 6 \, \text{V}$, $I_{DQ} = 2000 \, \text{mA}$ (controlled with $V_G$). The drain bias voltage range is 3 to 6 V, and the quiescent drain current biasing range is 1500 to 2500 mA.

$V_G$ pads 2 and 16 are connected internally; choose either pad for layout convenience. Muting can be accomplished by setting the $V_G$ to the pinched off voltage ($V_G = -2 \, \text{V}$).

$V_D$ bias must be applied to $V_D1$, $V_D2$, $V_D3$, and $V_D4$ pads.

$V_D1$ pads 4 and 14 are connected internally, and only one pad is required for biasing. Choose either pad for layout convenience.

$V_D2$ pads 5 and 13 are connected internally, and only one pad is required for biasing. Choose either pad for layout convenience.

Both $V_D3$ pads (6 and 12) are required for current symmetry.

Both $V_D4$ pads (8 and 10) are required for current symmetry.

Operating the MAAP-011139-DIE

Turn-on
1. Apply $V_G (-1.5 \, \text{V})$.
2. Apply $V_D (6.0 \, \text{V typical})$.
3. Set $I_{DQ}$ by adjusting $V_G$ more positive (typically $V_G \sim -0.9 \, \text{V}$ for $I_{DQ} = 2000 \, \text{mA}$).
4. Apply $RF_{IN}$ signal.

Turn-off
1. Remove $RF_{IN}$ signal.
2. Decrease $V_G$ to -1.5 V.
3. Decrease $V_D$ to 0 V.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.

Die Attachment
This product is manufactured from 0.050 mm (0.002”) thick GaAs substrate and has vias through to the backside to enable grounding to the circuit.

Recommended conductive epoxy is Namics Unimec XH9890-6. Epoxy should be applied and cured in accordance with the manufacturer’s specifications and should avoid contact with the top of the die.
