MAAP-011193

4 W Power Amplifier
7.7 - 8.5 GHz

Features
- 20 dB Small Signal Gain
- 46.5 dBm Third Order Intercept Point (OIP3)
- >36.5 dBm Saturated Output Power (P_{SAT})
- Bias 2000 mA at 8 V
- Lead-Free 7mm Copper Coin Air Cavity Package
- RoHS* Compliant

Description
The MAAP-011193 is a packaged linear power amplifier that operates from 7.7 - 8.5 GHz. The device provides 20 dB gain and 46.5 dBm Output Third Order Intercept Point (OIP3) with >35.5 dBm saturated output power (P_{SAT}). The packaged amplifier comes in an air cavity 7 mm surface mount package with a copper coin paddle and is comprised of a two stage power amplifier MMIC. The device includes on-chip ESD protection structures and DC by-pass capacitors to ease the implementation and volume assembly of the packaged part.

The device is specifically designed for use in 8 GHz point-to-point radios for cellular backhaul applications.

</table>

1. Reference Application Note M513 for reel size information.

2. Drain 2 Bias can be connected from either pins 6 or 12
3. The exposed pad centered on the package bottom must be connected to RF and DC ground.

Electrical Specifications: Freq. = 7.7 - 8.5 GHz, \( V_D = 8 \) V, \( I_{DQ}^4 = 2000 \) mA, \( T_A = +25^\circ C \)

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1A HBM devices.
