Features
- High Gain: 25 dB @ 30 GHz
- P1dB: 34.5 dBm
- P3dB: 36 dBm
- IM3 Level: -27 dBc @ P_{OUT} 29 dBm/tone
- Power Added Efficiency: 27.5 % at P3dB
- Lead-Free 5 mm 32-lead AQFN Package
- RoHS* Compliant

Description
The MAAP-011233 is a 4-stage, 4 W power amplifier assembled in a lead-free 5 mm 32-lead AQFN plastic package. This power amplifier operates from 28.5 to 31 GHz and provides 26 dB of linear gain, 4 W saturated output power and 27.5 % efficiency while biased at 6 V.

The MAAP-011233 can be used as a power amplifier ideally suited for VSAT communications.

This product is fabricated using a GaAs pHEMT process which features full passivation for enhanced reliability.

Ordering Information

<td>Junction Temperature$^{5,6}$</td>
<td>$+160^\circ$C</td>
</tr>
<tr>
<td>Operating Temperature</td>
<td>-40$^\circ$C to $+85^\circ$C</td>
</tr>
</tbody>
</table>

5. Operating at nominal conditions with junction temperature $\leq +160^\circ$C will ensure MTTF $> 1 \times 10^6$ hours.
6. Junction Temperature ($T_J = T_C + \Theta_{JC} \times (I \times V - P_{OUT} - P_{IN})$). Typical thermal resistance ($\Theta_{JC}$) = 4.4 $\degree$C/W.
   a) For $T_C = +25^\circ$C, $T_J = +82^\circ$C @ 6 V, 2.8 A, $P_{OUT} = 36$ dBm, $P_{IN} = 14$ dBm
   b) For $T_C = +85^\circ$C, $T_J = +137^\circ$C @ 6 V, 2.5 A, $P_{OUT} = 35$ dBm, $P_{IN} = 14$ dBm

## Absolute Maximum Ratings$^{7,8}$

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Absolute Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input Power</td>
<td>20 dBm</td>
</tr>
<tr>
<td>Drain Voltage</td>
<td>6.5 V</td>

</tr>
<tr>
<td>Storage Temperature</td>
<td>-65$^\circ$C to +125$^\circ$C</td>
</tr>
</tbody>
</table>

7. Exceeding any one or combination of these limits may cause permanent damage to this device.
8. MACOM does not recommend sustained operation near these survivability limits.
9. Junction temperature directly effects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.

## Handling Procedures

Please observe the following precautions to avoid damage:

### Static Sensitivity

These electronics devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.

MACOM Technology Solutions Inc. (MACOM) and its affiliates reserve the right to make changes to the product(s) or information contained herein without notice. Visit [www.macom.com](https://www.macom.com) for additional data sheets and product information.

Sample Board Material Specifications

Top Layer: 1/2 oz Copper Cladding, 0.017 mm thickness  
Dielectric Layer: Rogers RO4003C 0.203 mm thickness  
Bottom Layer: 1/2 oz Copper Cladding, 0.017 mm thickness  
Finished overall thickness: 0.238 mm
**Sample Board Layout:**
RF input and output port pre-matching circuit patterns are designed to compensate for packaging effects. Input and output patterns are identical.

**Biasing Conditions**
Recommended biasing conditions are \( V_D = 6\, \text{V} \), \( I_{DQ} = 2\, \text{A} \) (controlled with \( V_G \)). The drain bias voltage range is 3 to 6 V, and the quiescent drain current biasing range is 1.5 to 2.5 A.

\( V_G \) pins 10 and 11 are connected internally; choose either pin for layout convenience. Muting can be accomplished by setting the \( V_G \) to the pinched off voltage (\( V_G = -2\, \text{V} \)).

\( V_D \) bias must be applied to \( V_{D1}, V_{D2}, V_{D3}, \) and \( V_{D4} \) pins.

\( V_{D3} \) pins 14 and either pin 27 or 28 are required for current symmetry. Pins 27 and 28 are connected internally; choose either pin for layout convenience.

Both \( V_{D4} \) pins 15 and 26 are required for current symmetry.

**Operating the MAAP-011233**

**Turn-on**
1. Apply \( V_G \) (-1.5 V).
2. Apply \( V_{D1}, V_{D2}, V_{D3}, V_{D4} \) (6.0 V typical).
3. Set \( I_{DQ} \) by adjusting \( V_G \) more positive (typically -0.9 to -1.0 V for \( I_{DQ} = 2\, \text{A} \)).
4. Apply \( RF_{IN} \) signal.

**Turn-off**
1. Remove \( RF_{IN} \) signal.
2. Decrease \( V_G \) to -1.5 V.
3. Decrease \( V_{D1}, V_{D2}, V_{D3}, V_{D4} \) to 0 V.

**Application Information**
The MAAP-011233 is designed to be easy to use yet high performance. The ultra small size and simple bias allow easy placement on system board. RF input and output ports are DC de-coupled internally.
