MAAP-011250

Power Amplifier, 4 W
27.5 - 30 GHz

Features
- High Gain: 24 dB
- P1dB: 34.8 dBm
- P3dB: 36 dBm
- IM3 Level: -23 dBc @ $P_{\text{out}} = 30 \text{ dBm/tone}$
- Power Added Efficiency: 20% @ P3dB
- Temperature Compensated Output Power Detector
- Lead-Free 5 mm AQFN 32-lead Package
- RoHS* Compliant

Description
The MAAP-011250 is a balanced 4 W, 4-stage power amplifier assembled in a lead-free 5 mm 32-lead AQFN plastic package. This power amplifier operates from 27.5 to 30 GHz and provides 24 dB of linear gain, 4 W saturated output power and 20 % efficiency while biased at 6 V.

The MAAP-011250 can be used as a power amplifier stage or as a driver stage in higher power applications. This device is ideally suited for VSAT and 28 GHz PTP applications.

This product is fabricated using a GaAs pHEMT process which features full passivation for enhanced reliability.

5. MACOM does not recommend sustained operation at power levels above 3 dB gain compression.

### Maximum Operating Ratings

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input Power$^5$</td>
<td>15 dBm</td>
</tr>
<tr>
<td>Junction Temperature$^6,7$</td>
<td>+160°C</td>
</tr>
<tr>
<td>Operating Temperature</td>
<td>-40°C to +85°C</td>
</tr>
</tbody>
</table>

6. Operating at nominal conditions with junction temperature ≤ +160°C will ensure MTTF > $1 \times 10^9$ hours.

7. Junction Temperature ($T_J = T_C + \Theta_{JC} \cdot (V \cdot I - (P_{OUT} - P_{IN})$)
   Typical thermal resistance ($\Theta_{JC}$) = $4^\circ\text{C/W}$.
   a) For $T_C = +25^\circ$  
      $T_J = +88^\circ \text{C} @ 6 \text{ V}, 3.3 \text{ A}, P_{OUT} = 36 \text{ dBm}, P_{IN} = 14.5 \text{ dBm}$
   b) For $T_C = +85^\circ$  
      $T_J = +146^\circ \text{C} @ 6 \text{ V}, 3.0 \text{ A}, P_{OUT} = 34.5 \text{ dBm}, P_{IN} = 14.5 \text{ dBm}$

### Absolute Maximum Ratings$^8,9$

<table>
<thead>
<tr>
<th>Parameter</th>

<td>-65°C to +125°C</td>
</tr>
</tbody>
</table>

8. Exceeding any one or combination of these limits may cause permanent damage to this device.

9. MACOM does not recommend sustained operation near these survivability limits.

10. Junction temperature directly effects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.

### Handling Procedures

Please observe the following precautions to avoid damage:

**Static Sensitivity**

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.

Sample Board Material Specifications

Top Layer: 1/2 oz Copper Cladding, 0.017 mm thickness
Dielectric Layer: Rogers RO4003C 0.203 mm thickness
Bottom Layer: 1/2 oz Copper Cladding, 0.017 mm thickness
Finished overall thickness: 0.238 mm
Recommended PCB Layout Detail:
RF input and output pre-matching circuit patterns are identical and are designed to compensate packaging effects. Transmission line dimensions apply to a PCB with 0.203 mm thick Rogers RO4003C laminate dielectric. Performance curves shown in this data sheet were measured with these circuit patterns.

Biasing Conditions
Recommended biasing conditions are \( V_D = 6 \text{ V}, \) \( I_{DSQ} = 2.3 \text{ A} \) (controlled with \( V_G \)). The drain bias voltage range is 3 to 6 V, and the quiescent drain current biasing range is 2 to 2.5 A.

\( V_G \) pins 10 and 11 are connected internally but are not connected to pin 31; \( V_G \) bias must be applied to pins 31 and 10 or 11. Muting can be accomplished by setting the \( V_G \) to the pinched off voltage (\( V_G = -2 \text{ V} \)).

\( V_D \) bias must be applied to all \( V_{DX} \) pins (\( V_{D1}, V_{D2}, \) and \( V_{D3} \)) on both sides of device as these pins are not internally connected.

Operating the MAAP-011250

**Turn-on**
1. Apply \( V_G \) (-1.5 V).
2. Apply \( V_D \) (6.0 V typical).
3. Set \( I_{DO} \) by adjusting \( V_G \) more positive (typically -0.9 to -1.0 V for \( I_{DSQ} = 2.3 \text{ A} \)).
4. Apply RF\(_{IN}\) signal.

**Turn-off**
1. Remove RF\(_{IN}\) signal.
2. Decrease \( V_G \) to -1.5 V.
3. Decrease \( V_D \) to 0 V.
