Voltage Variable Attenuator
5.8 - 16 GHz

Features
- 5.8 - 16 GHz Frequency Range
- 2.0 dB Insertion Loss @ 10 GHz
- >30 dB Attenuation Range
- High Linearity, 30 dBm IIP3
- Lead-Free 3 mm, 16-Lead QFN Package
- RoHS* Compliant

Description
The MAAT-010521-L1 is a voltage variable attenuator with analog control and >30 dB of attenuation. Excellent linearity is maintained over the full attenuation range. The attenuation level is set by two control voltages of 0 to -2 V. This device is assembled in a lead free 3 mm 16 lead PQFN plastic package.

Applications include transceivers for cellular infrastructure.

1. It is recommended to connect No Connection (N/C) pins to ground.
2. The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.
Voltage Variable Attenuator
5.8 - 16 GHz

Electrical Specifications: $T_A = +25^\circ C$, $Z_0 = 50 \, \Omega$, $P_{IN} = -10 \, \text{dBm}$

3. To increase attenuation from minimum attenuation state ($V_{C1} = -2 \, \text{V}$ and $V_{C2} = -2 \, \text{V}$) to maximum attenuation state ($V_{C1} = 0 \, \text{V}$ and $V_{C2} = 0 \, \text{V}$), $V_{C1}$ increases to full range prior to adjusting $V_{C2}$. Typical attenuation measured on MACOM Sample Board in state: $V_{C1} = 0 \, \text{V} \& V_{C2} = -0.8 \, \text{V}$ is 20.5 dB for 12.7 - 15.4 GHz band.

4. Guaranteed on MACOM Sample Board only.

Handling Procedures

The following precautions should be observed to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.
