Features

- Industry Standard Surface Mount Package (SC-79)
- Lead-Free (RoHS Compliant)
  Available with 260 °C Reflow Compatibility
- Low Loss, High Isolation Switching Diodes
- Tape and Reel Packaging

Description and Applications

M/A-COM offers a silicon PIN diode in low cost, surface mount plastic package for use as a switch where low loss and high isolation is required. These diodes are offered as an RoHS compliant device with 100% matte Sn plating. This particular PIN diode was designed to accommodate circuits requiring the benefits of low resistance and requiring low capacitance for various microwave control circuit applications.

This PIN diode is available in the SC-79 (case style 1279) package. This package is supplied on tape and reel for automatic pick and place assembly. The tape and reel suffix designation is a “T” at the end of the part number.

Devices mounted in series configuration and fixture losses removed form data.
Mounting Information

The illustration indicates the recommended mounting pad configuration for the SC-79 package. Solder paste containing flux should be screened onto the pads to a thickness of 0.005-0.007 inches. The plastic package is placed in position, firmly adhering to the solder paste.

Permanent attachment is performed by a reflow soldering procedure during which the tab temperature does not exceed +275 °C and the body temperature does not exceed +260 °C. Please refer to Application Note M538 for surface mounting instructions.
