MADT-011000-DIE

Power Detector Bare Die
5 - 44 GHz

Features
- Input Power: -15 to +15 dBm
- Dynamic Range: 30 dB
- DC supply: 4.5 V, 70 µA
- Die size: 1.00 × 0.75 × 0.1 mm
- Passivated Die
- ESD Protected
- RoHS* Compliant

Description
MADT-011000-DIE is a single-ended, internally-matched power detector with wide frequency range and high dynamic range. The circuit consumes 70 µA from a 4.5 V supply, while matched detector and reference diodes provide temperature compensation in differential operation.

The 100 µm thick GaAs die is fully passivated for reliability and ease of handling.

MADT-011000-DIE is well suited for power control in microwave radios, test and measurement equipment, and radar applications.

MADT-011000-DIE is also available in a 3 mm QFN package. Refer to datasheet MADT-011000.

Application Circuit

6. External 27 k$\Omega$ resistors are required for optimum performance.
7. Typical $V_{ref} = 0.83$V
8. Attach bare die to PCB or carrier using conductive epoxy

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1B devices.
