Features
- Input Power: -15 to +15 dBm
- Dynamic Range: 30 dB
- DC supply: 4.5 V, 70 μA
- Lead-Free 3 mm 16-Lead QFN Package
- ESD protected
- RoHS* Compliant

Description
MADT-011000 is a single-ended, internally-matched power detector with wide input bandwidth and high dynamic range. The circuit consumes 70 μA from a 4.5 V supply, while matched detector and reference diodes provide temperature compensation in differential operation.

The power detector is housed in a 3 mm 16-lead QFN package and is ESD protected for reliability and ease of handling.

MADT-011000 is well suited for power control in microwave radios, test and measurement equipment, and radar applications.

MADT-011000 is also available in bare die format. Refer to datasheet MADT-011000-DIE.

6. Exceeding any one or combination of these limits may cause permanent damage to this device.
7. MACOM does not recommend sustained operation near these survivability limits.

## Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1B devices.

8. External 27 k$\Omega$ resistors are recommended for optimum performance.
9. Typical $V_{ref} = 0.74$ V
Typical Performance Curves: $T_A = 25^\circ C$
