**Features**

- 16 - 24 GHz Output Frequency Range
- 17 dBm Output Power
- High 1xF<sub>IN</sub> and 3xF<sub>IN</sub> Suppression
- High Dynamic Range
- Lead-Free 3 mm, 16-Lead QFN Package
- RoHS* Compliant and 260°C Reflow Compatible

**Description**

The MAFC-010511 is an active frequency doubler with an output frequency range of 16 - 24GHz. The input power level ranges from -5 to +5 dBm, delivering a typical output power of 17 dBm. The device has excellent input and output return losses, and high 1xF<sub>IN</sub> and 3xF<sub>IN</sub> isolations.

The MAFC-010511 is ideally suited for use in LO chains in point-to-point radios for cellular backhaul applications. The 3mm QFN package is RoHS compliant and compatible with reflow temperatures to 260°C.

2. It is recommended that all No Connection pins (N/C) are connected to ground.
3. The exposed pad centered on the package bottom must be connected to RF and DC ground.

4. It is recommended to use active bias on gate voltages to keep the drain currents constant in order to maintain the best performance over temperature.

**Absolute Maximum Ratings**: 5,6,7

</tbody>
</table>

5. Exceeding any one or combination of these limits may cause permanent damage to this device.
6. MACOM does not recommend sustained operation near these survivability limits.
7. Operating at nominal conditions with \(T_J \leq 160^\circ \text{C}\) will ensure MTTF \(> 1 \times 10^6 \text{ hours} \).
8. Junction Temperature \((T_J) = T_C + \Theta_{JC} \cdot ((V \cdot I) - (P_{OUT} - P_{IN}))\)
   Typical thermal resistance \((\Theta_{JC}) = 93^\circ \text{C/W}\).
   a) For \(T_C = 25^\circ \text{C}\),
   \(T_J = 81^\circ \text{C} @ 5 \text{ V, 130 mA, } P_{IN} = +5 \text{ dBm, } P_{OUT} = 17 \text{ dBm}\)
   b) For \(T_C = 85^\circ \text{C}\),
   \(T_J = 141^\circ \text{C} @ 5 \text{ V, 130 mA, } P_{IN} = +5 \text{ dBm, } P_{OUT} = 17 \text{ dBm}\)

**Handling Procedures**

The following precautions should be observed to avoid damage:

**Static Sensitivity**

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1A devices.
Typical Performance Curves: \( V_D = +5 \text{ V}, \ V_G = -0.7 \text{ V}, \ Z_0 = 50 \Omega \)

### Output Power @ 2xF\( _\text{IN} \) vs. Temp., \( P_{\text{IN}} = 0 \text{ dBm} \)

- **2x\( F_{\text{IN}} \), \( P_{\text{IN}} = -5 \text{ dBm} \)**
