Description
MAMX-011043 is an image-reject passive diode mixer MMIC. The mixer operates over an ultrawide bandwidth of 15 - 45 GHz. LO operating range is 12 dBm to 18 dBm. The mixer offers low conversion loss, good linearity and excellent image rejection over the 15 - 45 GHz range. The MAMX-011043 also operates up to 10 GHz IF. The image-reject circuit configuration provides excellent port isolation while internal 50 Ω matching simplifies its application.

This mixer is well suited for applications such as test and measurement, microwave radio and radar.

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. MACOM does not recommend sustained operation near these survivability limits.
6. Operating at nominal conditions with $T_J \leq +150^\circ \text{C}$ will ensure $MTTF > 1 \times 10^6$ hours. Thermal resistance, $\Theta_{JC}$ is 85°C/W.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.

Assembly Information

- Do not subject the device to excessive force, especially at elevated temperatures > 60°C.
- No-clean flux is required for assembly. Post SMT washing is not recommended.
