5. All specifications refer to down-conversion operation with upper sideband selected, unless otherwise noted.

6. Exceeding any one or combination of these limits may cause permanent damage to this device.
7. MACOM does not recommend sustained operation near these survivability limits.
8. Operating at nominal conditions with $T_J \leq +150^\circ$C will ensure MTTF $> 1 \times 10^6$ hours. Thermal resistance, $\Theta_{JC}$ is 85°C/W.

**Handling Procedures**

Please observe the following precautions to avoid damage:

**Static Sensitivity**

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1B devices.

**Assembly Information**

- Do not subject the device to excessive force, especially at elevated temperatures $> 60^\circ$C.
- No-clean flux is required for assembly. Post SMT washing is not recommended.
