## Description

M/A-COM's MAMXSS0013 is a passive mixer that achieves the performance of a double balanced diode mixer in a lead-free SOT-25 package. The MAMXSS0013 is ideally suited for use where high level RF signals and very wide dynamic range are required. Typical applications include frequency up/down conversion, modulation and demodulation in receivers and transmitters for base station and portable systems.

The MAMXSS0013 uses FETs as mixing elements to achieve very wide dynamic range in a low cost plastic package. The mixer operates with LO drive levels of +3 dBm to +8 dBm. The LO port may be externally tuned for operation in various frequency bands.

M/A-COM's MAMXSS0013 is fabricated using a mature 0.5 micron gate length GaAs MESFET process. The process features full passivation for increased performance and reliability. The MAMXSS0013 is 100% RF tested to ensure performance specification compliance.

The spurious table shows the spurious signals resulting from the mixing of the RF and LO input signals, assuming down conversion. Mixing products are indicated relative to the IF. The lower frequency mixing term is shown for two different RF input levels. The top number is for an RF input power of 0 dBm, the lower number is for -10 dBm.

$|nF_{RF} - mF_{LO}|$ , RF = 0 dBm  
 $|nF_{RF} - mF_{LO}|$ , RF = -10 dBm  
 RF Frequency = 1850 MHz  
 LO Frequency = 1710 MHz

## Typical Performance Curves

- **Test Conditions for Down Converter Application:** RF = 1850 MHz (-10 dBm), IF = 140 MHz, LO = 1710 MHz (+5 dBm).
- **Test Conditions for Up Converter Application:** LO = 1710 MHz (+5 dBm), IF = 140 MHz (-10 dBm), RF = 1850 MHz.

## Wide-

- **Test Conditions for Wide-Band Application:** RF = -10 dBm, IF = 140 MHz, LO = +11 dBm, LO Port resistively matched. Lower LO drive operation is available for narrow band performance using external reactive matching. The 3 dB IF bandwidth is 500 MHz. IF frequencies above 200 MHz can be optimized for low conversion loss by using external matching components.
