Features
- Positive Voltage Control
- High Isolation:
  - 62 dB @ 1 GHz
  - 65 dB @ 2 GHz
- Low Insertion Loss:
  - 0.65 dB @ 1 GHz
  - 0.70 dB @ 2 GHz
- 50 Ω Internal Terminations
- Fast Settling for Low Gate Lag requirements
- Lead-Free MSOP-8-EP Package
- Halogen-Free “Green” Mold Compound
- RoHS* Compliant and 260°C Reflow Compatible

Description
The MASW-008543 GaAs monolithic switch provides high isolation in a lead-free, plastic surface mount package. This device is ideal for applications across a broad range of frequencies.

MACOM fabricates the MASW-008543 using a 0.5-micron gate length pHEMT process. The process features full chip passivation for performance and reliability.

1. Reference Application Note M513 for reel size information.
2. All sample boards include 5 loose parts.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

<td>-40°C to +85°C</td>
</tr>
<tr>
<td>Storage Temperature</td>
<td>-65°C to +150°C</td>
</tr>
</tbody>
</table>

5. Exceeding any one or combination of these limits may cause permanent damage to this device.
6. MACOM does not recommend sustained operation near these survivability limits.

**Truth Table**⁷,⁸,⁹

<table>
<thead>
<tr>
<th>V1</th>
<th>V2</th>
<th>RFC-RF1</th>
<th>RFC-RF2</th>
</tr>
</thead>
<tbody>
<tr>
<td>( V_{\text{HIGH}} )</td>
<td>( V_{\text{LOW}} )</td>
<td>On</td>
<td>Off</td>
</tr>
<tr>
<td>( V_{\text{LOW}} )</td>
<td>( V_{\text{HIGH}} )</td>
<td>Off</td>
<td>On</td>
</tr>
</tbody>
</table>

7. \( V_{\text{LOW}} = 0 \, \text{V} \pm 0.2 \, \text{V}, \, V_{\text{HIGH}} = 1.8 \, \text{V} \) to +5 \, \text{V}, minimum \( V_{\text{HIGH}} - V_{\text{LOW}} = 1.8 \, \text{V} \), maximum \( V_{\text{HIGH}} - V_{\text{LOW}} = 8.0 \, \text{V} \).
8. For use at low voltage, MACOM recommends connecting a 20k pull up resistor on pin 3 to a voltage equal to the most positive control voltage.
9. Negative control voltage may be used. The \( V_{\text{HIGH}} \) in the table would be the most positive (0 \, \text{V}) and the \( V_{\text{LOW}} \) would be the most negative (-3 \, \text{V} for example).

Applications Section—Low Frequency Measurement

**Insertion Loss**

- **S21 (dB)**

- **Frequency (GHz)**

**Isolation**

- **S21 (dB)**

- **Frequency (GHz)**

**Return Loss**

- **Return Loss (dB)**

- **Frequency (GHz)**

This data shows the MASW-008543 measured on an evaluation board with 0 Ω resistors. The board and connector loss have been removed.

0 Ω resistors can be used if negative control is available. To avoid changing the device bias points, the device should not be exposed to DC potentials on the RF ports.

With positive control MACOM recommends using DC-Blocking capacitors large enough that their $X_c$ is insignificant at the frequency of use. At 50 MHz a capacitor value greater than 1000 pF is recommended.
Lead-Free MSOP-8-EP†

† Reference Application Note M538 for lead-free solder reflow recommendations.
Meets JEDEC moisture sensitivity level 1 requirements.
Plating is 100% matte tin over copper.
