GaAs Broadband DPDT Diversity Switch
1.0 - 6.0 GHz

Features
- 802.11a + b/g Broadband Applications
- Broadband Performance: 1.0 - 6.0 GHz
- Low Insertion Loss: 1.0 dB @ 2.4 GHz
  1.2 dB @ 6.0 GHz
- High Isolation: 38 dB @ 2.4 GHz
  31 dB @ 6.0 GHz
- Fast Switching Speed: 0.5 µm GaAs PHEMT
- Lead-Free 3 mm 12-Lead PQFN Package
- 100% Matte Tin Plating over Copper
- Halogen-Free “Green” Mold Compound
- RoHS* Compliant and 260°C Reflow Compatible

Description
M/A-COM’s MASWSS0107 is a broadband GaAs PHEMT MMIC diversity switch in a low cost, lead-free 3 mm 12-lead PQFN package. The MASWSS0107 is ideally suited for applications where very small size and low cost are required.

Typical applications are for WLAN IEEE 802.11a and 802.11b/g systems that employ two antennas for transmit and receive diversity. Other applications include cordless phones and base stations. Designed for high power, this DPDT switch maintains high linearity up to 6.0 GHz.

The MASWSS0107 can be controlled with either two or four control signals. With four control signals each of the four insertion paths can be controlled individually. To control the switch with only two signals, tie pairs of control lines together.

The MASWSS0107 is fabricated using a 0.5 micron gate length GaAs PHEMT process. The process features full passivation for performance and reliability.

3. For positive voltage control, external DC blocking capacitors are required on all RF ports.
4. Insertion loss can be optimized by varying the DC blocking capacitor value.

6. Exceeding any one or combination of these limits may cause permanent damage to this device.
7. M/A-COM does not recommend sustained operation near these survivability limits.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
