SPDT Default On High Isolation CATV Switch
5 – 3000 MHz

Features
- 75 Ω Terminations RF1 / RF2
- Positive Voltage Control
- High Isolation: 90 dB @ 216 MHz
- Low Insertion Loss: 1.4 dB @ 2200 MHz
- Lead-Free 3 mm 16-Lead PQFN Package
- Halogen-Free “Green” Mold Compound
- RoHS* Compliant and 260°C Reflow Compatible

Description
The MASW-009101 is a single pole double throw (SPDT) switch in a lead-free 3 mm 16-lead PQFN package. It meets FCC 15.115 specification of 80 dB isolation between RF1 and RF2 at 216 MHz during powered and un-powered states. The default on un-powered state provides a low insertion loss path from RFC to RF1 while maintaining high isolation between RF2 and RFC/RF1.

This device is ideally suited for applications where low control voltage, high isolation, small size and low cost are required.

Typical applications are to replace mechanical relays in CATV and satellite systems. This part can be used in all 75 Ω systems operating up to 3 GHz.

The MASW-009101 is fabricated using a GaAs pHEMT process. The process features full passivation for performance and reliability.

6. Exceeding any one or combination of these limits may cause permanent damage.

7. M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
