

Features

- Surface Mount Packages (SOT-23, SC70 3LD, SOD-323, SC-79)
- High Q at Low Voltages
- High Capacitance Ratio at Low Voltages
- SPC Process for Superior C-V Repeatability
- Available as Single and Common Cathode Pairs
- Tape and Reel Packaging
- Designed for Commercial Wireless Applications
- RoHS* Compliant

Applications

- Wireless Communications

Description

The MAVR-000200 series are ion-implanted, hyperabrupt junction, silicon tuning varactors in SOT-23, SC70 3LD, SOD-323 and SC-79 surface mount packages. This series of varactors is designed for high Q and low voltage operation. Each varactor type has a typical $Q > 400 @ -2 \text{ V}$. These diodes are offered with 100% matte Sn plating.

The MAVR-000200 series tuning varactors are ideally suited for wide band tuning and low phase noise applications where the supply voltage is limited to 5 volts or less. These varactors have been specifically designed for use in wireless communications up to the 2.4 GHz band. Applications include VCOs and voltage tuned filters.

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

Electrical Specifications @ $T_A = +25^\circ\text{C}$

Breakdown Voltage @ $I_R = 10 \mu\text{A}$, $V_b = 12 \text{ V}$ Minimum
Reverse Leakage Current @ $V_R = 10 \text{ V}$, $I_R = 100 \text{ nA}$ Maximum

Base Part #	Total Capacitance (pF)			Capacitance Ratio	Q Factor	
	f = 1 MHz, $V_R = 2 \text{ V}$			f = 1 MHz, $V_R = 4 \text{ V}$	f = 50 MHz, $V_R = 2 \text{ V}$	
	Min.	Nom.	Max.	$C_{T0.5} / C_{T4.0}$	Typ.	
MAVR-000240-x	3.0	3.5	4.2	2.3	3.5	450
MAVR-000250-x	2.3	2.7	3.5	1.8	3.5	450

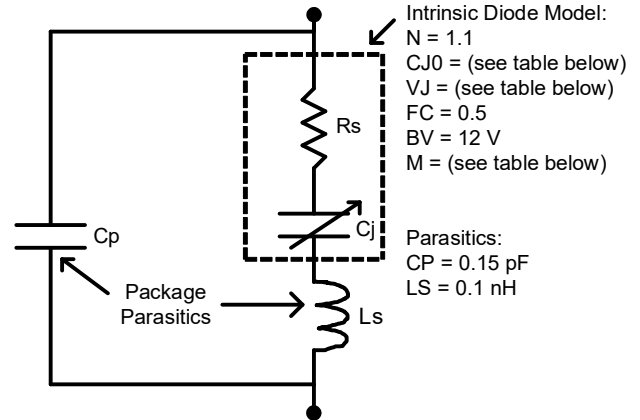

Absolute Maximum Ratings^{1,2}

@ $T_A = +25^\circ\text{C}$ (Unless Otherwise Noted)

Parameter	Absolute Maximum
Reverse Voltage	12 V
Forward Current	50 mA
Total Power Dissipation	250 mW
Operating & Storage Temperature	-55°C to $+125^\circ\text{C}$

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- MACOM does not recommend sustained operation near these survivability limits.

Spice Model

Base Part #	C_{J0} (pF)	V_J (V)	M
MAVR-000240	8.16	4.930	2.520
MAVR-000250	6.19	4.774	2.458

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Typical Performance Curves

Nominal Q vs. Reverse Voltage @ 50 MHz

Total Capacitance vs. Reverse Voltage @ 1 MHz

Nominal Change in Capacitance with Temperature

Mounting Information

The illustration indicates the recommended mounting pad configuration for the SC-79, SC70 3LD, SOT-23 and SOD-323 packages. Solder paste containing flux should be screened onto the pads to a thickness of 0.005 - 0.007 inches. The plastic package is placed in position, firmly adhering to the solder paste.

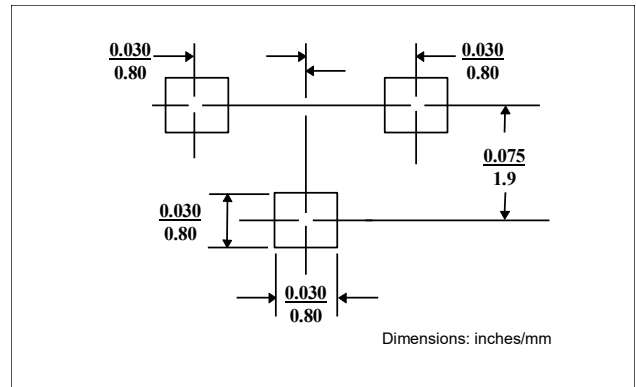

Permanent attachment is performed by a reflow soldering procedure during which the tab temperature does not exceed +275°C and the body temperature does not exceed +260°C.

Please refer to Application Note M538 for surface mounting instructions.
