MEST2G-150-10-CM30

Pin Diode Switch Element

Features
- High Power Handling 150 W @ 1.0 GHz or less
- Low Insertion Loss:
  0.05 dB @ 0.5 GHz
  0.06 dB @ 1.0 GHz
- Medium Isolation: 10 dB @ 0.5 GHz
- RoHS* Compliant

Description
The MEST2G-150-10-CM30 is a thermal to ground series diode switch element (EST2G) in an Aluminum Nitride package. This part is designed for a reliable high power switch application up to 150 watts. Usable up to 1.0 GHz.

Electrical Specifications: \( T_C = +25^\circ C \) (unless otherwise specified)

1. Exceeding any one or combination of these limits may cause permanent damage to this device.
2. MACOM does not recommend sustained operation near these survivability limits.

**Handling Procedures**

Please observe the following precautions to avoid damage:

**Static Sensitivity**

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 0 (HBM) devices.

**Typical Performance Curves: T<sub>A</sub> = 25°C, Z<sub>O</sub> = 50 Ω, -10 dBm Small Signal**

**Insertion Loss**

MEST2G-150-10-CM30

Pin Diode Switch Element

Resistance vs. Bias Current, 100 MHz

Junction Temperature vs. Input Power
Mounted on Heat Sink @ TA = 25°C, 1.3 GHz

PCB Layout

Plated through, filled and plated over vias

Solder mask should provide 60um clearance between copper pad and solder mask. Rounded pkg pads should have matching rounded solder mask openings.

Use circles or squares for the thermal land stencil design such that only get 60 to 80% solder paste coverage.
