Description

The MLP7131-2012 limiter PIN diode is a low series resistance, low capacitance limiter PIN diode packaged in a surface mount, low-parasitic plastic package. It is manufactured using a proprietary diode process for excellent performance and high reliability.

The $2.6 \mu\text{m}$ nominal I layer width of this diode produces a threshold level of 7 dBm nominal, for demanding receiver protection applications. The low series resistance ($< 1.5 \Omega$), and low total capacitance ($< 0.35 \text{ pF}$) of MLP7131-2012 produce excellent isolation and insertion loss in shunt, receiver protection applications.

The MLP7131-2012 limiter PIN diode is designed to be used in receiver protection applications.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 0 devices.

Moisture Sensitivity

These electronic devices are rated MSL 1.

Environmental Capabilities

Capable of meeting the environmental requirements of MIL-STD-750 and MIL-STD-883.

Assembly Instructions

Diodes may be placed onto circuit boards with pick and place manufacturing equipment from tape-reel. The devices are attached to the circuit using conventional solder re-flow or wave soldering procedures with RoHS type or Sn 60 / Pb 40 type solders.
