Microwave Power Silicon NPN Transistor
30W (peak), 960–1215MHz, 36V

Features
- Guaranteed performance @ 960-1215MHz, 36Vdc
- Output power: 30W peak
- Minimum gain: 9.0dB min., 9.5dB typ.
- 100% tested for load mismatch at all phase angles with 10:1 VSWR
- Hermetically sealed, industry standard package
- Silicon nitride passivated
- Gold metallized, emitter ballasted for long life and resistance to metal migration
- Internal input matching for broadband operation

Description and Applications
Designed for 960–1215 MHz long or short pulse common base amplifier applications such as JTIDS and Mode–S transmitters.

NOTES:
1. Under pulse RF operating conditions.
2. These devices are designed for RF operation. The total device dissipation rating applies only when the devices are operated as pulsed RF amplifiers.
3. Thermal Resistance is determined under specified RF operating conditions by infrared measurement techniques. (Worst case $\theta_{JC}$ value measured @ 23% duty cycle)
