Silicon Abrupt Tuning Varactor Diodes

Features
- Low Series Resistance
- High Q Factor
- Extensive Selection of Capacitance Values
- RoHS* Compliant

Description
The MTV4060 series are available with typical capacitance at reverse voltage of 4 V from 0.8 pF up to 15 pF. These silicon varactor diodes offer very high quality factor for low series resistance, very low leakage current and wide tuning range. These diodes are passivated with a high-reliability passivation for low leakage current and high reliability. The devices are available as unpackaged chips or in several package styles.

These rugged devices are capable of reliable operation in all military, commercial and industrial applications. Ideally suited for voltage controlled oscillators and filters and analog voltage controlled phase shifters.

The MTV4060 family of silicon abrupt tuning varactors are capable of meeting the environmental requirements of MIL-STD-750 and MIL-STD-883.

Electrical Specifications: $T_C = +25\, ^\circ\mathrm{C}$

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 0 devices.

Moisture Sensitivity

These electronic devices are rated MSL 1.
Typical Performance Curve:

*Junction Capacitance vs. Reverse Voltage*
