### Description

The WST4300D is a gallium nitride (GaN) high electron mobility transistor (HEMT). GaN has superior properties compared to silicon or gallium arsenide, including higher breakdown voltage, higher saturated electron drift velocity, and higher thermal conductivity. GaN HEMTs offer greater power density and wider bandwidths compared to Si and GaAs transistors.

### Absolute Maximum Ratings<sup>1,2</sup>

Parameter	Absolute Maximum
Drain-Source Voltage	84 V
Gate Voltage	-10, +2 V
Drain Current	4.5 A
Gate Current	11 mA
Storage Temperature	-55°C to +150°C
Mounting Temperature	+320°C, 30 seconds
Junction Temperature <sup>3,4</sup>	+225°C
Operating Temperature	-40°C to +85°C

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- MACOM does not recommend sustained operation near these survivability limits.
- Operating at nominal conditions with  $T_J \leq +225\text{ C}$  will ensure  $MTTF > 1 \times 10^6$  hours.
- Junction Temperature ( $T_J$ ) =  $T_C + \Theta_{jc} * (V * I)$   
Typical thermal resistance ( $\Theta_{jc}$ ) = 2.1°C/W for CW.
  - For  $T_C = +25^\circ\text{C}$ ,  
 $T_J = 115^\circ\text{C} @ P_{DISS} = 43\text{ W}$
  - For  $T_C = +85^\circ\text{C}$ ,  
 $T_J = 175^\circ\text{C} @ P_{DISS} = 43\text{ W}$

### Handling Procedures

Please observe the following precautions to avoid damage:

### Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Die Dimensions (units in microns)

Assembly Notes:

- Recommended solder is AuSn (80/20) solder. Refer to website for the Eutectic Die Bond Procedure application note.
- Vacuum Collet is the preferred method of pick-up.
- Die thickness is 3 mils.
- The backside of the die is the Source (ground) contact.
- Die back side gold plating is 5 microns thick minimum.
- Thermosonic ball or wedge bonding are the preferred connection methods.
- Gold wire must be used for connections.
- Use the die label (XXX-YYY) for correct orientation.
