Features
- 17.0 dB Small Signal Gain
- 3.0 dB Noise Figure
- Single, Positive Bias Supply
- 3x3mm QFN Package
- 100% RF Tested
- RoHS* Compliant and 260°C Reflow Compatible

Description
The XL1010-QT is a three stage 20.0-38.0 GHz GaAs MMIC low noise amplifier with a small signal gain of 17.0 dB with a noise figure of 3.0 dB. The device comes in a RoHS compliant, 3x3mm QFN package and requires only a single positive bias supply.

The devices uses MACOM’s GaAs pHEMT device model technology, and is based upon electron beam lithography to ensure high repeatability and uniformity.

The device is well suited to multiple receiver applications which require broadband performance with simple bias requirements and the ease of volume manufacturing with 3x3mm QFN packaging.

4. Channel temperature directly affects a device's MTTF. It is recommended to keep channel temperature as low as possible to maximize lifetime.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 2 devices.
Low Noise Amplifier
20 - 38 GHz

XL1010-QT

Typical Performance Curves

**Input Return Loss vs. Frequency**

**Small Signal Gain vs. Frequency**

**Reverse Isolation vs. Frequency**

**Output Return Loss vs. Frequency**

**Noise Figure vs. Frequency**

**P1dB vs. Frequency, 5 V @ 52 mA**
App Note [1] Biasing - The device is operated with a single, positive bias supply. The device performance is insensitive to changes in bias condition; however, gain and power handling can be slightly improved with higher bias conditions without significantly affecting the noise figure performance. Typical biasing conditions within the specified performance ranges are Vd=3 V, 35 mA, Vd=4 V, 45 mA, Vd=5 V, 55 mA.
