XX1007-BD

Doubler
13.5-17.0/27.0-34.0 GHz

Features
- Integrated Gain, Doubler and Driver Stages
- Self-biased Architecture
- +21.0 dBm Output Saturated Power
- 40.0 dBc Fundamental Suppression
- On-Chip ESD Protection
- 100% On-Wafer RF, DC & Output Power Testing
- 100% Visual Inspection to MIL-STD-883 Method 2010
- RoHS* Compliant and 260°C Reflow Compatible

Description
M/A-COM Tech’s 13.5-17.0 / 27.0-34.0 GHz GaAs MMIC doubler integrates a gain stage, passive doubler and driver amplifier onto a single device. The XX1007-BD has a self-biased architecture requiring a single positive supply (+5V) only and integrated on-chip bypassing capacitor eliminating the need for external capacitor. This MMIC uses M/A-COM Tech’s GaAs PHEMT device model technology, and is based upon electron beam lithography to ensure high repeatability and uniformity. The chip has integrated ESD structures for protection and surface passivation to protect and provide a rugged part with backside via holes and gold metallization to allow either a conductive epoxy or eutectic solder die attach process. This device is well suited for Millimeter wave Point-to-Point Radio, LMDS, SATCOM and VSAT applications.

(1) Channel temperature directly affects a device’s MTTF. It is recommended to keep channel temperature as low as possible to maximize lifetime.

ADVANCED: Data Sheets contain information regarding a product M/A-COM Technology Solutions is considering for development. Performance is based on target specifications, simulated results, and/or prototype measurements. Commitment to develop is not guaranteed.

PRELIMINARY: Data Sheets contain information regarding a product M/A-COM Technology Solutions has under development. Performance is based on engineering tests. Specifications are typical. Mechanical outline has been fixed. Engineering samples and/or test data may be available. Commitment to produce in volume is not guaranteed.

Handling Procedures
Please observe the following precautions to avoid damage:

Static Sensitivity
Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 2 devices.
